Plant and invertebrate remains from the Iron Age and Roman site at North Cave, East Riding of Yorkshire (site code NC95): data archive

by John Carrott, Allan Hall, Harry Kenward and Frances Large

The data reported here refer to analyses of samples excavated during the 1995 season at North Cave and relate to deposits adjacent to those excavated in 1986-7, the data for which are archived in the report by Allison *et al.* (1990). An interpretation of the data from both excavations is given by Allison *et al.* (forthcoming)

Table 2. Lists of plant taxa and other materials recorded from samples from excavations at North Cave (N95). The samples are presented in context number order, and within the lists the taxonomic order and taxonomy for the identified plant remains follow Tutin et al. (1964-80) for the vascular plants and Smith (1978) for mosses. Other materials are listed alphabetically. The figure at the right-hand side of each column is the abundance score, on a scale of 1 (one or a few fragments or individuals per kg) to 4 (a major component, very abundant). Abbreviations for plant parts can be interpreted from the list of taxa in Table 1.

Table 3 (overleaf). Selected statistics for assemblages of adult beetles and bugs from all samples from North Cave (NC95). Explanations of the abbreviations for the insect statistics are given in Table 4. The 1986-7 material was reported before the introduction of some new ecological codes and has been included in this table for completeness.

Table 5. Complete lists of insects and some other invertebrates from samples from North Cave (NC95). Taxa are in rank order of abundance and then taxonomic order within each list except for taxa labelled with an asterisk, which were not used for calculating main statistics. In the column immediately following the number, a blank indicates fully-quantitative recording; s—'several'; m—'many'; see Kenward 1992.
