

**ISSG structured abstract for:**

**National Library of Medicine: systematic reviews PubMed subset strategy**

**Structured abstract prepared by: Sue Bayliss**

**Objective:**

This filter aims to retrieve citations identified as systematic reviews, meta-analyses, reviews of clinical trials, evidence-based medicine, consensus development conferences, guidelines and citations to articles from journals specializing in review studies of value to clinicians.

**Methods:**

Methods are not detailed here (see ISSG commentary).

**Results:**

Results are not provided (see ISSG commentary).

**Discussion:**

The authors note that the subset is available on PubMed on the Limits Screen under "Subsets" and on the "Clinical Queries" screen.

**ISSG commentary:**

The filter page does not make it clear where to locate the research on which the strategy is based, although it does link to a list of related sources and the first of these is to the paper describing the filter developed by Shojania and Bero. Could be stated more explicitly however.
