

São Carlos, 10/08/2013

To whom it may concern:

The ongoing collaboration between the CeProBio and the FP7 SUNLIBB consortia has been a source of multiple developments in terms of scientific cooperation between Brazilian and European laboratories. Within this context we have established a High Throughput facility in my laboratory at the University of Sao Paulo, Sao Carlos in order to develop tools for improving the utilization of biomass for bioenergy and biorenewables. The High Throughput facility is fully functional at present and allows to accelerate discovery in this strategic area of Industrial Biotechnology.

Do not hesitate to contact me should you require more information about this or any other matter related to the progress within the CeProBio/SUNLLIB project."

Sincerely yours,

Igor Polikarpov
