- Notes:
1. SAP ratings are energy-cost ratings determined by the government's Standard Assessment Procedure. It is an index based on calculated annual space and water heating costs for a standard heating regime expressed on a scale of 1 (highly inefficient) to 100 (highly efficient).
  2. All figures from 2008/09 are based on the SAP 2012 energy-efficiency rating.
  3. Separate housing association and local authority estimates are not available prior to 2008/9.
  4. Enhancements to SAP modelling partly account for the rise in average SAP ratings between 2017/18 and 2018/19.
  5. Figures for 2020/21 and 2021/22 should be treated with caution. The sample excludes vacant dwellings and figures are partly extrapolated from EHS 2019/20 and past trends as the pandemic precluded full internal inspections.

- Notes:
1. The EPC Bands are based on SAP 2012 ratings (shown in brackets). SAP is the Standard Assessment procedure for energy rating of dwellings.
  2. The EPC bands range from 'G' (very poor) to 'A' (highly efficient).
  3. Figures for 2020 should be treated with caution - see Table 24a for further details.
