

Fazakerley: Higher Land

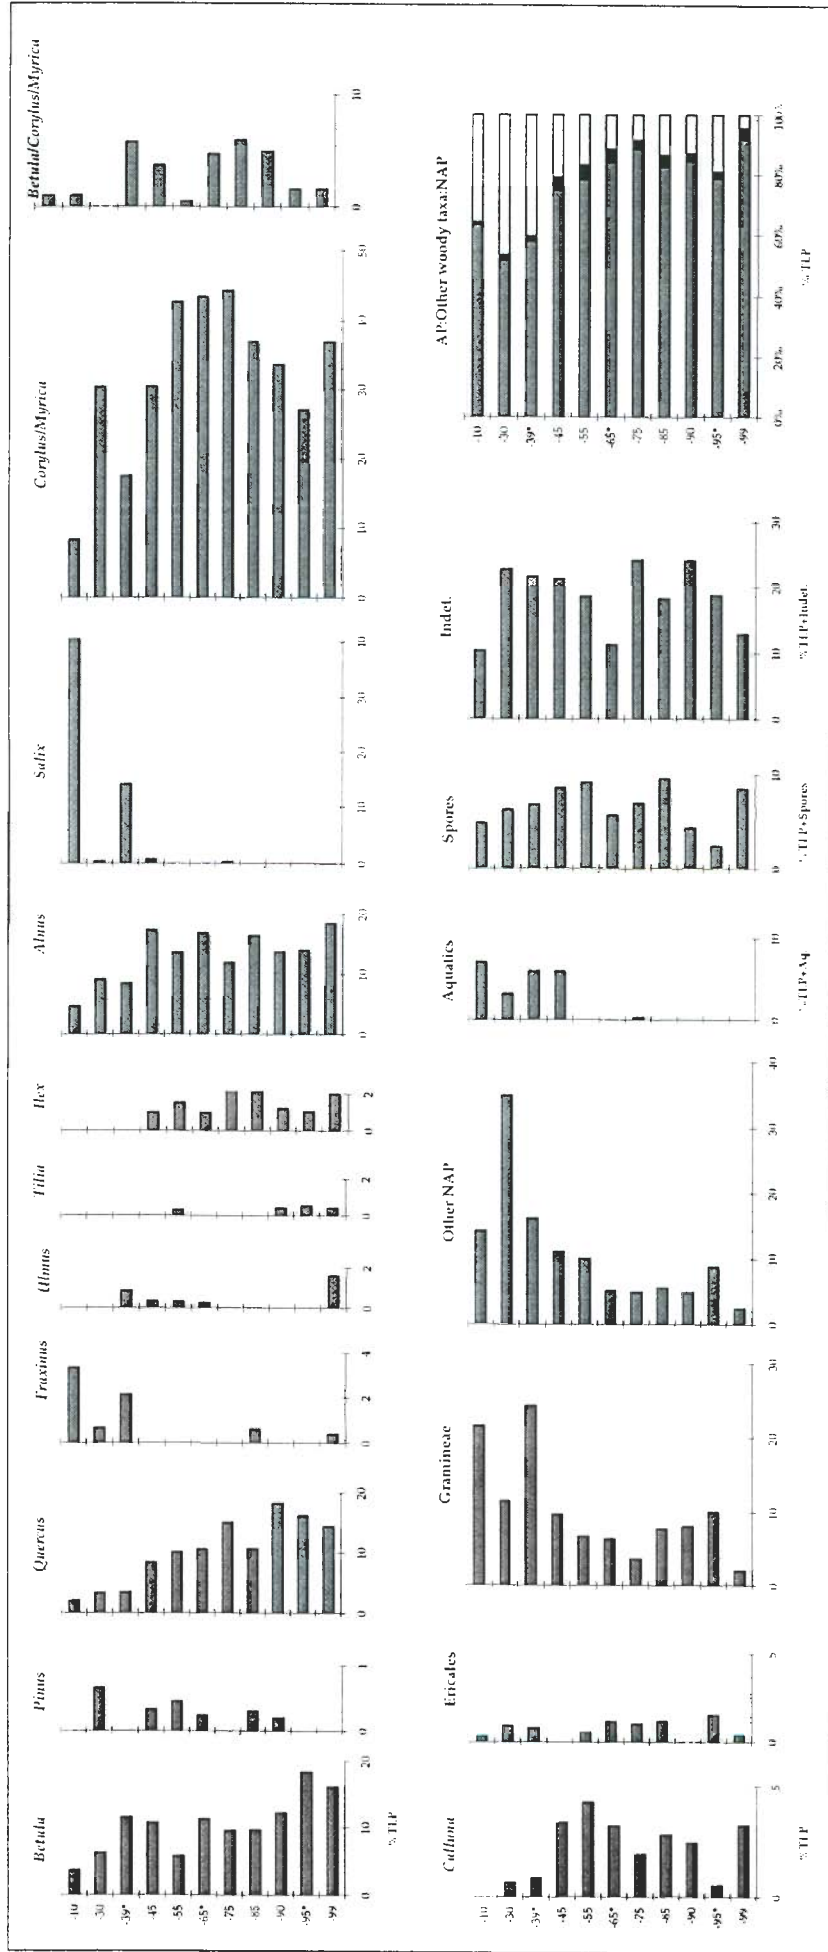

Figure 1. Results of pollen analysis: histograms for selected pollen types. In each case, the depth in centimetres is given on the left-most graph (* indicates a sample examined during the assessment). Sums for calculation of percentages are "TLP" (total land pollen) unless otherwise shown. Note that, for technical reasons, the horizontal scales vary from taxon to taxon and the vertical arrangement of bars is regular and does not show relative depths.
