

**Notes on the vertebrate remains from Leeman Road, York
(Sitecode 2000.569)**

Methods

Where possible fragments were identified to species or species group, using the reference collection at the Environmental Archaeology Unit, University of York. The total weight of bone was recorded for each context.

Results

A total of three bones representing two contexts were presented for identification. Overall preservation was fair, with colour described as 'fawn' or 'dark brown'.

None of the fragments could be identified to species.

Context 2000

1 unidentified large mammal rib fragment
Weight = 5.9 g

Context 4001

1 unidentified large mammal vertebra fragment
1 unidentified medium-sized mammal rib fragment
Weight = 8 g
