

Computer Science Module Summary Statistics

2025-26 Semester 1

This document contains summary statistics for all on-campus modules taught during Semester 1 of the 2025/26 academic year in the Department of Computer Science. Statistics are omitted for modules with less than 10 students with marks (*).

The Computer Science Department enacts a recalibration policy that states that all modules should achieve a median mark that is within the second-class boundaries (i.e. 50 to 69.5). Where modules fall outside of these bounds, recalibration may be applied (subject to conditions and approval of the module leader and the Board of Examiners).

Nonetheless, the mark profile for each module may vary from other modules and other years. Please do not assume that because a module had, for example, a high average in one year, it will have a high average in a subsequent year.

Modules in Stages 3 and 4 are often dual-taught with similar (or identical) assessments. These are grouped together in this document.

Modules that contain group work are tagged (^g), while modules with multiple assessments are tagged (^m). The statistics in this document have been calculated based on the ratified marks for the entire module.
