How can we identify and select the best possible candidates for teacher training?

A) RATIONALE FOR THE PROJECT
In this project, you will develop and test improved methods for selecting prospective teachers. You will work with teacher education providers (or employers) to develop and test evidence-supported selection methods, such as multiple mini-interviews (MMIs) or new forms of situational judgment tests (SJTs). You will work on developing, validating, and testing new teacher selection tools.

B) REFERENCES THAT SHOULD BE READ (if you do not have access to these, please email me)

C) RESEARCH AIMS / QUESTIONS
Do new teacher selection methods predict important teaching outcomes?
How do applicants and teacher training programmes (or employers) view these new methods?

D) METHODS
The project may involve quantitative and/or qualitative methods. A background in psychology (especially educational, organisational, or cross-cultural) would be beneficial.

E) SKILLS AND OPPORTUNITIES YOU COULD GAIN
You will gain skills in collecting and analysing quantitative and/or qualitative data.
