

Clinical skills for Nursing Students

It is important to note that local policies and procedures must always be followed and that these will always take precedence over the advice offered below.

It is also important that students are properly prepared before undertaking any aspect of direct patient care and receive appropriate supervision

Criteria for Assessment guidelines

Code - Yes - if Trust/ area policy allow

No - students must never undertake this skill

Part of the stage onwards - Only following completion of CSU session

Clinical skill		Can student nurses undertake	Stage 1	Stage 2	Stage 3/4

Insertion of Urinary Catheters	Urethral catheterisation	Yes - in accordance with local policy & only following completion of CSU session (prior to KANP2)	Yes - only when CSU session complete & in accordance with local policy	Yes	Yes
	Suprapubic catheterisation	No	No	No	No

Students should note that where they are unable to directly perform certain nursing skills or tasks, much learning can be achieved through observation, discussion, and reflection. Where this is the case it is helpful to understand what learning you will need to demonstrate to your Practice Assessor or Supervisor to achieve your proficiency sign off. This may be achieved via simulation, accessing a session with the Clinical Teaching Fellows or simulation with your Practice Assessor or Supervisor, forexample.

If you have any additional questions please discuss this in the first instance with your Practice Assessor, Practice Supervisor who will be able to offer advice in line with **local policy and procedure**.

If you require any further support, please contact the Practice Learning Link Team at the University dohs-pll@york.ac.uk who will be happy to offer advice.
