WoSS / Work Stress Screener 13-items

Aim

The aim of the work stress screener (WoSS - 13) is to identify the extent to which an employee experiences characteristics of benign and harmful stress at work.

Application of the instrument

The WOSS - 13 consists of 13 items, divided into two parts (Form A and Form B). Form A is about characteristics of benign stress and consists of eight items which are organized into two sub-scales. Items 1-5 relate to positive work-related affect/stress and items 6-8 relate to general positive affect. Form B is about characteristics of harmful stress and consists of five items. A maximum of 24 points can be scored in Form A; 15 points can be scored in Form B.

Extra question: Questions A9 and B6 explore if work functioning benefits from the level of benign work stress, or suffers from the level of harmful work stress, respectively.

Application on the work floor:

The instrument can be filled out by employees themselves. It takes approximately five minutes to complete the screener.

Scoring:

A sum score is calculated per subscale by adding the items 1 to 8 in Form A and 1 to 5 in Form B.

Score "never" as "0", "several days" as "1", "more than half of the days" as "2" and "almost every day" as "3".

A high score on sub-scale A is an indication that there is benign stress. A high score on sub-scale B is an indication that there is malignant or harmful stress.

Target population:

The screener is intended for employees in all branches.
