### Are there any additional requirements of accrediting bodies or PSRB or pre-requisite professional experience needed to study this programme?

Please Select Y/N: No if Yes, provide details

N/A

### 4. Programme Leader

Nigel Lowe

### 4.b. How are wider stakeholders such as professional bodies and employers involved in the design of the programme and in ongoing reflection on its ef

The programme is monitored through initial accreditation and re-accreditation on a 5-year cycle through the Royal Society of Chemistry. Employer overvie through the Department's External Advisory Group comprising academic and sector employer representatives. Advice from External Examiners has been supreparation for approval.

### 5. Purpose and learning outcomes of the programme

### 5.a. Statement of purpose for applicants to the programme

Our degree has been carefully constructed to train the next generation of chemists, and will take students on a journey of exploration deep into the subject forefront of cutting-edge chemical research. In particular, we focus on showing applications of the fundamental chemistry, and providing practical training art facility. We undertake to develop the full range of skills, from communication and team-working to scientific literacy and problem solving, in a clear che In this way, students will be ideally prepared for whatever comes next – be it a MSc/PhD position, research work in industry, a career in teaching, or other graduate-level work. This is reflected in our strong final destination statistics. The course is delivered with a strong focus on small group teaching and allow between bachelors and masters programmes with the opportunity to specialise into three separate 'Chemistry with' courses in addition to Chemistry itself courses are defined by a distinct pathway through our specialised (rather than core) modules; all these specialised modules are optional modules on the gecourses and the flexibility students have to switch between our named and generic courses (up to the end of Year 2, and provisional on achieving the 55% required to access Year 3 MChem) means that any student can choose any specialised module provided they concomitantly change their course. The BSc 'C Biological and Medicinal Chemistry' describes a 3-year course with defined, cognate specialised topics in Year 2 (20 credits) and Year 3 (20 credits) and a re (40 credits) related to biological or medicinal chemistry. The 3-year BSc, with its more even balance of chemistry-specific content and general training in tris the natural choice to launch careers in a wide range of graduate professions including chemistry; the 4-year MChem qualification takes students to the roof modern, interdisciplinary chemistry, and it is thought to be the natural choice for those anticipating an academic or commercial career in the subject.

### 5.b.Programme Learning OutcomesPlease provide six to eight statements of what a graduate of the programme can be expected to do.

**PLO** On successful completion of the programme, graduates will be able to:

- demonstrate learning and problem solving skills through the acquisition and application of a broad range of fundamental chemical principles and 2 apply fundamental chemical principles and knowledge to the in-depth study of chemical science specialisms relating to biological and medicinal chemical science specialisms relating to the science specialism of the science specialism science specialisms relating to the science specialism science specialisms relating to the science specialism science specialis solution of problems therein. 3 design and safely conduct chemical experiments through an effective risk assessment. Accurately document and record experiments to enable the synthesis of chemical compounds and analysis of physical measurements, of both a quantitative and qualitative nature. interpret experimental data by using mathematical skills, chemical knowledge, information technology and scientific conventions. 5 effectively articulate scientific principles, experimental results and research findings in a way that is accessible to a variety of audiences through w other formats. 6 independently, or as part of a group, plan, design and conduct an open-ended investigative research project in an area related to biological or me to consolidate and extend knowledge and understanding of chemistry. demonstrate employability skills such as teamworking, commercial awareness, self-management and creativity and be equipped to work in a prof in their future careers in a range of areas including chemistry, biological and medicinal chemistry.
- 5.c. Programme Learning Outcome for year in industry (where applicable) For programmes which lead to the title 'with a Year in Industry' typically inv

5.d. Programme Learning Outcome for year abroad programmes (where applicable) For programmes which lead to the title 'with a Year Abroad' – typic

N/A

5.e. Explanation of the choice of Programme Learning OutcomesPlease explain your rationale for choosing these PLOs in a statement that can be used to Why the PLOs are considered ambitious or stretching?

The PLOs describe a journey from consolidating basic chemical principles at the start of the course through to contributing to cutting-edge research in core interdisciplinary chemistry at the end. The range of formative learning experiences in lecture, laboratory, workshop and tutorial, allied to independent wor and group settings, provide a structured training to meet the aspiration of the PLOs. The summative assessment points, including formal examinations, ass

presentations and extended research project, allow the achievement of the knowledge, skills and attributes of the PLOs to be demonstrated.

ii) The ways in which these outcomes are distinctive or particularly advantageous to the student:

The outcomes are advantageous as they ensure that the research-led teaching of chemical science is integrated with the development of laboratory, problem project work (PLO6) gives the BSc some element of preparation for research careers in chemistry, though not as extensively as the 4-year MChem, and der skills with relevance to a range of future emplyment.

iii) How the programme learning outcomes develop students' digital literacy and use technology-enhanced learning to achieve the discipline and pedagogic goals which some computation of the protein poster on a practical project involving presentation software and specialist molecular drawing packages including the use of molecular the Protein Data Bank (PDB). They also carry out a public communication of science exercise, producing a popular science article or YouTube video aimed a application of polymer science. Some student videos have had thousands of views globally and been highlighted by international chemistry magazines. In a communication skills are enhanced by the smartphone video recording and sharing of group presentations and feedback thereon. Students will use special databases used to visualise proteins and to calculate properties of small molecules. Year 3 focuses on scientific literacy, and develops the ability to write sc with effective use of search tools and databases to access reserach literature culminating in the BSc project report. Computational approaches continue to applications of quantum chemistry. Data manipulation and analysis in laboratory work frequently involve the use of scientific software, with appropriate troper trunks near comprehensive use of lecture recording, and all modules are supported by material on the VLE including screencasts, external link with pockets of use of 'flipping' and 'clicker' technology. The VLE is exploited variously for online workflow management including submission of summativ iv) How the PLOs support and enhance the students' employability (for example, opportunities for students to apply their learning in a real world setting)?

At the start of Year 1, students take part in 'The Happening' – a fun, industrially-led event, in which they get to know other students as they work in teams world chemical problem. In Year 1, they also carry out Integrated Chemistry Team Practical Projects in which the contents of a 'typical' night out are analys alcohol and a 'morning-after' coffee, to determine levels of fat, protein, alcohol, sugar and caffeine. This develops research, time-management and team-v Year 2, these ideas of team-working are developed much further in the 'Group Exercises', in which they work in smaller teams in a mock industrial compan world chemistry problem. The suite of exercises covers various aspects of the chemical and related industries, the development of which was supported by themselves. Having to organise meetings, keep minutes and consider financial implications also helps develop business skills. The Year 3 BSc research proje planning of open-ended research — only by collaborating effectively as a group, or an individual, within a research group can students achieve an optimal u the complex topic they are studying — exactly as in modern interdisciplinary research. Chemistry at York is an Athena Swan Gold department, and we foste atmosphere, particularly through our team-working exercises, in which students will be encouraged to recognise the contributions of all the diverse memb

### v) Consultation with Careers

The Department has a dedicated Careers Liaison Officer who works closely with the Industrial Placement Coordinator to circulate information and opportu and to deliver training through CV Writing and Interview Skill workshops. These are delivered in collaboration with staff from Careers. The new course will current links to, and involvement of, Careers from the current course. For this reason, we have not consulted directly with the Careers service during the p new course.

vi) How will students who need additional support for academic and transferable skills be identified and supported by the Department?

The Department has two principal mechanisms for identifying students who require additional support. Firstly, any student whose assessment results are a failing are identified by the appropriate examinations officers and then written to by the Chair of the Board of Studies and counselled by their supervisors. will meet with the Student Welfare Officer and their supervisors and a personal learning plan developed. Secondly, the need for individual support is ident college teaching system where progress is monitored weekly. Student supervisors review progress at the end of term meetings and any actions identified. are assigned a mentor who is studying in a higher year in the same chemistry college as them. These mentors can provide advice on a range of social issues preparing for arrival at university, settling into York or finding good student houses in the second year, as well as on academic issues such as option module Furthermore, there are centrally-timetabled revision classes, run by the mentors, to provide academic peer-to-peer support to the benefit of mentees and

### vii) How is teaching informed and led by research in the department/ centre/ University?

The Department of Chemistry has a research-led teaching philosophy. Although most of the core material in Years 1 and 2 is common in UK Chemistry Dep 3 material aligns with the research specialisms in the Departments. Furthermore, the option module structure has been specifically designed to reflect the expertise in the Department with courses on environmental, sustainable, analytical and biological/medicinal chemistry as well as options on mechanistic cl

5.f. Stage-level progressionPlease complete the table below, to summarise students' progressive development towards the achievement of PLOs, in ter												
Stage 0 (if your progra	mme has a Foundation y	year, use the toggles to	the left to show the hide	den rows)								
On progression from th	ne first year (Stage 0), stu	idents will be able to:

### N/A

### iii) Internationalisation/ globalisation

The Department regularly recruits a small but significant number of undergraduates from around the world. The make-up of our academic staff and especi international postgraduate cohort create an appropriately supportive atmosphere. The postgraduate-led 'Chemical Interactions' society runs a number of year to which all staff and student members are invited and these are often run along internationally-themed lines. We regularly host Erasmus students wi modules and our Yr Abroad scheme (MChem only) places ca. 15 Year 4 students annually in partner universities around the world.

### iv) Inclusivity

### This refers to the protected characteristics and duties on the University outlined in the Equality Act 2010

With over 10 years of accreditation at Gold level under the Athena SWAN scheme, the Department is justifiably proud of its record in this area. In addition Welfare Officer, the Department has identified a Disability Officer, a Women's Officer, a Study Skills Officer and a Harassment Officer. Additionally, a numb students have contributed articles and participated in events focusing on LGBT contributions to the discipline. We maintain a quiet room/prayer room for t and students. An Equality & Diversity session on inclusivity/unconscious bias is part of the Year 1 'Becoming a Professional Chemist' activity emphasising its teamworking in the modern workplace. The Department participates actively in the Widening Participation initiative through targeted admission and outre involving schools not traditionally supplying York with Chemistry undergraduates.

### v) Summer term weeks 8-10

This period is home to our ICP laboratory-based group research projects at the end of Year 1 and to the Group Exercise and Career-focused activities of Year there are no timetabled activities in this slot at the end of Year 3 prior to graduation.

### 6. Reference points and programme regulations

6.a. Relevant Quality Assurance Agency benchmark statement(s) and other relevant external reference pointsPlease state relevant reference points cor

https://www.york.ac.uk/media/staffhome/learningandteaching/documents/policies/Framework%20for%20Programme%20Design%20-%20UG.pdf

http://www.gaa.ac.uk/assuring-standards-and-quality/the-quality-code/subject-benchmark-statements

http://www.gaa.ac.uk/publications/information-and-guidance/publication?PubID=2843#.VthM1fmLS70

The PLOs were designed to capture the spirit of York Pedagogy whilst retaining the scope of the national subject benchmark statements for chemistry and, purposes, the requirements for breadth and depth of coverage specified by the Royal Society of Chemistry.

### 6.b. University award regulations

The University's award and assessment regulations apply to all programmes: any exceptions that relate to this programme are approved by University Teaching Committee

### 6.c. Are students on the programme permitted to take elective modules?

(See: https://www.york.ac.uk/media/staffhome/learningandteaching/documents/policies/Framework%20for%20Programme%20Design%20-%20UG.pdf)

Please Select Y/N:	Yes

i) Contact with staff

Students meet our internationally recognised researchers through lectures, small group tutorials/workshops and laboratory sessions. Lectures deliver infor but much more with demonstrations, interactive problem solving (e.g. with access to model kits) and illustrative examples from academic and "real-world staff use 'flipped' material and 'clickers' to enhance interactivity. Typical support materials used include quizzes, extra links and screen-casts on the VLE, w Twitter and YouTube. Small group learning through our teaching college system provides supportive teaching through a mixture of tutorials (groups of 5 st workshops (groups of 20-25). These sessions tackle conceptual difficulties and challenge students to construct arguments and explain ideas to each other (pre-work helps students assess their understanding and writing skills, and develop problem solving skills (PLO1,5). Laboratory work is supported by acaden staff as well as postgraduates who teach, (PGWTs). Guidance is focused on developing safe working practices, good laboratory protocols, effective manipu equipment and instrumentation, and a deeper understanding of the skills needed to analyse data and to design investigations in preparation for research (ii) Students' independent study and formative work

The programme has been designed with our small-group college teaching system at its core. It is our belief (and comprehensively evidenced through stude that these activities are central to student learning and skill development. The majority of students' independent work and formative assessment is associated group teaching (PLO1,2,5,7). Laboratory work in Year 1 focuses on developing laboratory skills. Weekly assessment is formative with occasional summative being used to evaluate levels of competence. The focus of assessment will shift from rewarding attendance and report submission in favour of directly assi acquisition and demonstration of key laboratory skills (PLO3-7). Taught material in Year 4 is delivered as blended learning for all students whether in York, Industry or Year Abroad programmes. This approach prepares students for career development, self-study and PDP consistent with the postgraduate level learning is often divorced from formal lecture programmes (PLO7).

### iii) Summative Assessment

Summative assessment through exams remains key to testing PLOs 1 & 2 and builds directly on the formative assessment of work submitted in connection tutorials and workshops. Some assessment in Year 1 will be conducted through the use of MCQ, which allow the convenient assessment of a wide range of materiial (PLO1). More traditional written answers will be retained to test writing skills and provide preparation for conventional examinations in later yea Department makes use of various forms of continuous assessment that reduce the burden of formal exams and allow complementary skills to be develope As in the current course, higher years (Yrs 2-3) will be assessed summatively through traditional core exams (and assessed workshops) (PLO1), option exam workshops) (PLO2), practical work (through in-lab (PLO3) and post-lab assessment (PLO4,5), project work/reports (PLO3,4,5,6) and group exercises/presentations/posters/assorted multimedia output (PLO4,5,7).

### 8. Contribution of staff

8.a. Please outline (where applicable) the contribution of Postgraduate who Teach (PGWTs) to the programme. The programme must comply with the University Policy on PGWTs are principally involved in support and delivery of laboratory teaching. They play a direct role in teaching aspects of experimental and instrumental students and advising them on data collection and interpretation particularly in the area of spectroscopy. This is achieved through a combination of partici teaching sessions, formative assessment and summative assessment based on closely defined, moderated mark schemes. PGWTs are encouraged to ment making links between their own research and the activities students meet in a more didactic setting. They also play a key role in helping to maintain high H

8.b. If casual teaching staff and/or staff external to the University will be involved in delivery of the programme, please outline how they will contribute ar

Careers & Placements - 'With Placement Year' programmes
Students on all undergraduate and integrated masters programmes may apply to spend their third year on a work-based placement facilitated by Caree
Such students would return to their studies at Stage 3 in the following year, thus lengthening their programme by a year. Successful completion of the passociated assessment allows this to be recognised in programme title, which is amended to include 'with Placement Year' (e.g. BA in XYZ with Placeme
Placement Year also adds a Programme Learning Outcome, concerning employability. (See Careers & Placements for details).
In exceptional circumstances, UTC may approve an exemption from the 'Placement Year' initiative. This is usually granted only for compelling reasons of
accreditation; if the Department already has a Year in Industry with criteria sufficiently generic so as to allow the same range of placements; or if the pr
than three years in length.

practice, and
working well with
others

Working on practical experiments individually, in pairs, and in small groups. Implicit assessment through summative assessment through laboratory reports.

Developing professional modes of behaviour, with respect to sharing resources, learning and adhering to standard laboratory practice, and working well with others. Team working and presentations in a business context. Commercial awareness and creativity in chemical solutions to realworld business exercises.

Working on practical experiments individually, in pairs, and in small groups. Implicit assessment through summative assessment through laboratory reports. Working on problems through the Group Exercise including peer assessment of teamwork in industriallyderived case studies. Teamwork, commercial awareness and creativity and communication skills summatively assessed though team minutes, executive summary and

Developing
professional
modes of
behaviour, with

orojects.	
Creativity in	
esearch.	

Research Project. Students experience anindependent project experience within a research group or as a small group working on related topics involving engagement with planning, time management, teamwork and interpersonal communication with a range of Departmental staff and coworkers. Formative feedback available through academic supervision with summative assessment of outcomes implicitly assessed through overall productivity

Applications of	
cutting-edge	
biological and	
medicinal	
chemistry;	
creativity in	
research and	
implications for	
future affordable	
and effective	
treatments	

Application of research at the interface of biological and medicinal chemistry to current and future therapies through formative case studies and workshop activities. Introduction to research topics through lectures and formative case studies and workshop activities. Summative assessment of modelling of molecular interactions on drug design through assessed workshop.

## Overview of modules by stage

## Notes:

- [1] The credit level is an indication of the module's relative intellectual demand, complexity and depth of learning and of learner autonomy (Level 4/Certificate, Level 5/Intermediate, Lev
- [2] The credit value gives the notional workload for the module, where 1 credit corresponds to a notional workload of 10 hours (including contact hours, private study and assessment)
- [3] Special assessment rules (requiring University Teaching Committee approval); P/F the module marked on a pass/ fail basis (NB pass/ fail modules cannot be compensated); NC the
- [4] Independent Study Modules (ISMs) are assessed by a dissertation or substantial project report. They cannot be compensated (NC) and are subject to reassessment rules which differ
