2. Programme accreditation	by Professional, Statutory or Regulatory Bo	odies (PSRB)		
2.a. Is the programme recognised	l or accredited by a PSRB			
Please Select Y/N: Yes	if No move to section 3			
2.b. Please provide details of any	approval / accreditation event needed, including	: timescales, the nature of the ev	vent, central support /	/ information required:
All existing programmes are accre org/Education/courses-and-caree	dited by the Royal Society of Chemistry (PSRB) and rs/accredited-courses/). Full accreditation for the n	d future design and development new courses was obtained from th	need to be considered e RSC in April 2017.	l within this accreditation framework (http://www.rsc.
2.c. Does/ will approval or recog	nition require exceptions to University rules/pract	ices?Please select Y/N	No	if Yes, provide details
N/A		·		
2.d. Any additional information (e.g. student attainment required to achieve accree	ditation) that are required by the	PSRB should be recor	rded here
N/A				
3. Additional Professional or	· Vocational Standards			
Are there any additional require	ments of accrediting bodies or PSRB or pre-requisit	te professional experience neede	d to study this progra	imme?
Please Select Y/N: No	if Yes, provide details			
N/A				
4. Programme Leader			C + C + H + C	
4.a. Please name the programme	leader for the year to which the programme desig	gn applies and any key members	of staff responsible to	or designing, maintaining and overseeing the programme.
nigei Lowe				
4.b. How are wider stakeholders	such as professional bodies and employers involve	ed in the design of the programm	e and in ongoing refle	ection on its effectiveness?
The programme is monitored thro External Advisory Group comprisi	bugh initial accreditation and re-accreditation on a sing academic and sector employer representatives.	5-year cycle through the Royal So Advice from External Examiners h	ciety of Chemistry. Em as been solicited durir	ployer overview is achieved through the Department's ng preparation for approval.
5. Purpose and learning out	comes of the programme			
5.a. Statement of purpose for ap	plicants to the programme			

Our degree is constructed to train the next generation of chemists, taking students deep into the subject and up to the forefront of cutting-edge chemical research. We focus on showing applications of fundamental chemistry, and providing practical training in a state-of-the-art facility. We undertake to develop the full range of skills in a chemistry context, from communication and team-working to scientific literacy and problem solving, so students will be ideally prepared for a PhD position, research in industry, a career in teaching, or other high-quality graduate-level work, as reflected in our strong final destination statistics. The course is delivered with a strong focus on small group teaching and choice between bachelors and masters programmes with specialisation into three 'Chemistry with' courses in addition to 'Chemistry'. 'Chemistry with' courses follow a distinct pathway through our specialised (rather than core) modules; all these are optional modules on the generic Chemistry courses and the flexibility students have to switch between named and generic courses (up to the end of Year 2, and provisional on achieving the 55% threshold required to access Year 3 MChem) means that any student can choose any specialised module provided they concomitantly change course. 'Chemistry, Biological and Medicinal Chemistry' describes a 4-year course with defined specialised topics in Year 2 (20 credits), Year 3 (20 credits) and Year 4 (20 credits) and a fourth year spent using York's modern research facilities, at one of our partner overseas universities, or on industrial placement in one of the UK's largest chemistry placement schemes pursuing a research project related to biological or medicinal chemistry. As the 4-year MChem takes students to the research frontier of modern, interdisciplinary chemistry, it is the natural choice for academic and commercial careers in the subject; the 3-year BSc, with its more even balance of chemistry-specific content and general skills training, is the natural choice to laun

5.b.Programme Learning OutcomesPlease provide six to eight statements of what a graduate of the programme can be expected to do.

PLO On successful completion of the programme, graduates will be able to:

8

1 demonstrate learning and problem solving skills through the acquisition and application of a broad range of fundamental and advanced chemical principles and knowledge.

2 apply fundamental and advanced chemical principles and knowledge to the in-depth study of chemical science specialisms relating to biological and medicinal chemistry and the solution of problems at the forefront of the subject.

- 3 design and safely conduct chemical experiments through an effective risk assessment. Accurately document and record experiments to enable the effective synthesis of complex chemical compounds and advanced analysis of physical measurements, of both a quantitative and qualitative nature.
- 4 interpret experimental data by using mathematical skills, advanced chemical knowledge, information technology and scientific conventions.

⁵ effectively articulate scientific principles, experimental results and research findings in a way that is accessible to a variety of audiences through written, oral and other formats.

- 6 independently plan, design and conduct an extended, open-ended investigative research project to extend knowledge and understanding at the forefront of the chemical sciences in an area related to biological or medicinal chemistry.
- 7 demonstrate employability skills such as teamworking, commercial awareness, self-management and creativity and be equipped to work in a professional manner in their future careers consistent with the expectations of a research chemist in academic, governmental or commercial positions.

5.c. Programme Learning Outcome for year in industry (where applicable)For programmes which lead to the title 'with a Year in Industry' – typically involving an additional year – please provide

For the Year in Industry PLO 6 is modified to independently plan, design and conduct an extended, open-ended investigative research project in an industrial environment to extend knowledge and understanding at the forefront of the chemical sciences in an area related to biological or medicinal chemistry.

5.d. Programme Learning Outcome for year abroad programmes (where applicable)For programmes which lead to the title 'with a Year Abroad' – typically involving an additional year – please

For the Year Abroad PLO 6 is modified to independently plan, design and conduct an extended, open-ended investigative research project at an overseas university to extend knowledge and understanding at the forefront of the chemical sciences in an area related to biological or medicinal chemistry.

5.e. Explanation of the choice of Programme Learning OutcomesPlease explain your rationale for choosing these PLOs in a statement that can be used for students (such as in a student handbook). i) Why the PLOs are considered ambitious or stretching? The PLOs describe a journey from consolidating basic chemical principles at the start of the course through to contributing to cutting-edge research in core and interdisciplinary chemistry at the end. The range of formative learning experiences in lecture, laboratory, workshop and tutorial, allied to independent work in individual and group settings, provide a structured training to meet the aspiration of the PLOs. The summative assessment points, including formal examinations, assessed presentations and extended research projects, allow the achievement of the knowledge, skills and attributes of the PLOs to be demonstrated.

ii) The ways in which these outcomes are distinctive or particularly advantageous to the student:

The outcomes are advantageous as they ensure that the research-led teaching of chemical science is integrated with the development of laboratory, problem solving and employability skills. This will ensure that the York Chemist has all the technical and employability skills needed in his/her future career regardless of whether this career lies inside or outside the chemical sciences. The PLOs remind students that the course provides an education through chemistry as well as an education in chemistry. The year 4 experience in particular (PLO6) makes the MChem ideal preparation for those thinking of careers in chemistry whether in industry or further study in academia.

iii) How the programme learning outcomes develop students' digital literacy and use technology-enhanced learning to achieve the discipline and pedagogic goals which support active student learning through peer/tutor

Chemistry students develop effective communication and related skills through regular application of digital literacy skills. In Year 1, students will give an oral presentation and prepare a team poster on a practical project involving presentation software and specialist molecular drawing packages including the use of molecular graphics with the Protein Data Bank (PDB). They also carry out a public communication of science exercise, producing a popular science article or YouTube video aimed at explaining an application of polymer science. Some student videos have had thousands of views globally and been highlighted by international chemistry magazines. In Year 2, communication skills are enhanced by the smartphone video recording and sharing of group presentations and feedback thereon. Students use specialist software and databases used to visualise proteins and to calculate properties of small molecules. Year 3 focuses on scientific report-writing consistent with research publications through effective use of search tools and databases to access reserach literature. Computational approaches continue to include applications of quantum chemistry. Data manipulation and analysis in laboratory work frequently involve the use of scientific software, with appropriate training. In Year 4, open learning is supported by technology-enhanced learning tools. The Department makes near comprehensive use of lecture recording, and all modules are supported by material on the VLE including screencasts, external links and quizzes, with pockets of use of 'flipping' and 'clicker' technology. The VLE is exploited variously for online workflow management including submission of summative assessments.

iv) How the PLOs support and enhance the students' employability (for example, opportunities for students to apply their learning in a real world setting)?

http://www.york.ac.uk/about/departments/support-and-admin/careers/staff/

At the start of Year 1, students take part in 'The Happening' – a fun, industrially-led event, in which they get to know other students as they work in teams to solve a real-world chemical problem. In Year 1, they also carry out Integrated Chemistry Team Practical Projects in which the contents of a 'typical' night out are analysed – junk food, alcohol and a 'morning-after' coffee, to determine levels of fat, protein, alcohol, sugar and caffeine. This develops research, time-management and team-working skills. In Year 2, these ideas of team-working are developed much further in the 'Group Exercises', in which they work in smaller teams in a mock industrial company to solve a real-world chemistry problem. The suite of exercises covers various aspects of the chemical and related industries, the

v) Consultation with Careers

The Department has a dedicated Careers Liaison Officer who works closely with the Industrial Placement Coordinator to circulate information and opportunities to students and to deliver training through CV Writing and Interview Skill workshops. These are delivered in collaboration with staff from Careers. The new course will retain the current links to, and involvement of, Careers from the current course. For this reason, we have not consulted directly with the Careers service during the planning of the new course.

vi) How will students who need additional support for academic and transferable skills be identified and supported by the Department?

The Department has two principal mechanisms for identifying students who require additional support. Firstly, any student whose assessment results are either poor or failing are identified by the appropriate examinations officers and then written to by the Chair of the Board of Studies and counselled by their supervisors. These students will meet with the Student Welfare Officer and their supervisors and a personal learning plan developed. Secondly, the need for individual support is identified through our college teaching system where progress is monitored weekly. Student supervisors review progress at the end of term meetings and any actions identified. All new students are assigned a mentor who is studying in a higher year in the same chemistry college as them. These mentors can provide advice on a range of social issues, such as preparing for arrival at university, settling into York or finding good student houses in the second year, as well as on academic issues such as option module choices. Furthermore, there are centrally-timetabled revision classes, run by the mentors, to provide academic peer-to-peer support to the benefit of mentees and mentors. This scheme demonstrates how our chemistry college system helps to break down barriers and enables students to make personal connections across a large chemistry department.

vii) How is teaching informed and led by research in the department/ centre/ University?

The Department of Chemistry has a research-led teaching philosophy. Although most of the core material in Years 1 and 2 is common in UK Chemistry Departments, in Year 3 material aligns with the research specialisms in the Departments. Furthermore, the option module structure has been specifically designed to reflect the research expertise in the Department with courses on environmental, sustainable, analytical and biological/medicinal chemistry as well as options on mechanistic chemistry and advanced spectroscopy.

5.f. Stage-level prog	ressionPlease complete the table below, to sum	nmarise students' pro	gressive development	towards the achieveme	ent of PLOs, in terms o	f the characteristics th	at you expect

5.g. Other features of	the programme						
i) Distance Learning							
Does the programme i	nvolve distance learning:						
Please Select Y/N:	No if Yes, you are required to submit to T Checklist for Distance Learning Progra	eaching Committee:					
ii) Involvement of partr	ner organisations						
Are any partner organi	isations involved in the delivery of the programme?						
Please Select Y/N:	No University guidance on collaborative	lvement (such as contrib provision	utions to teaching, place	ement provision). Where	appropriate, see also the	2:	
(max 200 words)							
iii) Internationalisation, How does the program	/ globalisation nme promote internationalisation and encourage stud	dents to develop cross-cu	ultural capabilities?				
The Department regu	Ilarly recruits a small but significant number of u	ndergraduates from are	ound the world. The n	nake-up of our academi	ic staff and especially c	our large international p	oostgraduate
cohort create an app	ropriately supportive atmosphere. The postgradu	uate-led 'Chemical Inte	ractions' society runs	a number of events dur	ing the year to which a	all staff and student me	mbers are invited
and these are often r	un along internationally-themed lines. We regula	arly host Erasmus stude	ents within Chemistry	modules and our Yr Ab	road scheme places ca	. 15 Year 4 students an	nually in partner
universities around the	ne world.						
iv) Inclusivity	in ensuring equality, diversity and inclusion be embe	dded in the design conte	ent and delivery of the n	rogramme?			
How will good practice	in ensuring equality, diversity and inclusion be embed	dded in the design, conte	ent and delivery of the p	rogramme?			

This refers to the protected characteristics and duties on the University outlined in the Equality Act 2010

With over 10 years of accreditation at Gold level under the Athena SWAN scheme, the Department is justifiably proud of its record in this area. In addition to a Student Welfare Officer, the Department has identified a Disability Officer, a Women's Officer, a Study Skills Officer and a Harassment Officer. Additionally, a number of staff and students have contributed articles and participated in events focusing on LGBT contrbutions to the discipline. We maintain a quiet room/prayer room for the use of staff and students. An Equality & Diversity session on inclusivity/unconscious bias is part of the Year 1 'Becoming a Professional Chemist' activity emphasising its importance to teamworking in the modern workplace. The Department participates actively in the Widening Participation initiative through targeted admission and outreach activities involving schools not traditionally supplying York with Chemistry undergraduates.

v) Summer term weeks 8-10

Please summarise the activities that students will be expected to undertake during Weeks 8-10 of the Summer Term in each stage of the programme.

This period is home to our ICP laboratory-based group research projects at the end of Year 1 and to the Group Exercise and Career-focused activities of Year 2. Currently, there are no timetabled activities in this slot at the end of Year 3 not least because up to a third of the cohort may be actively preparing to take up industrial placements or to commence study overseas in Year 4.

6. Reference points and programme regulations

6.a. Relevant Quality Assurance Agency benchmark statement(s) and other relevant external reference pointsPlease state relevant reference points consulted (e.g. Framework for Higher Education Qualifications, National Occupational Standards, Subject Benchmark Statements or the requirements of PSRBs): See Undergraduate Modular Scheme: Framework for Programme Design:

https://www.york.ac.uk/media/staffhome/learningandteaching/documents/policies/Framework%20for%20Programme%20Design%20-%20UG.pdf

http://www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/subject-benchmark-statements

http://www.qaa.ac.uk/publications/information-and-guidance/publication?PubID=2843#.VthM1fmLS70

The PLOs were designed to capture the spirit of York Pedagogy whilst retaining the scope of the national subject benchmark statements for chemistry and, for accreditation purposes, the requirements for breadth and depth of coverage specified by the Royal Society of Chemistry.

6.b. University award regulations

The University's award and assessment regulations apply to all programmes: any exceptions that relate to this programme are approved by University Teaching Committee and are recorded at the end of this document.

6.c. Are students on the programme permitted to take elective modules?

(See: https://www.york.ac.uk/media/staffhome/learningandteaching/documents/policies/Framework%20for%20Programme%20Design%20-%20UG.pdf)

Please Select Y/N: Yes

7.c. Explanation of th	e programme and assessment designThe staten	nents should be in a fo	orm that can be used f	or students (such as in	a student handbook).	It should make clear t	o students why
i) Contact with staff							
Students meet our inf	ternationally recognised researchers through lect	ures, small group tuto	rials/workshops and la	boratory sessions. Lect	tures deliver information	on (PLO1.2) but much n	nore with
demonstrations, inter	ractive problem solving (e.g. with access to mode	el kits) and illustrative	examples from acader	nic and "real-world" co	ntexts. Some staff use	'flipped' material and '	clickers' to
enhance interactivity	Typical support materials used include guizzes,	extra links and screen-	casts on the VLE, with	links to Twitter and You	uTube. Small group lea	rning through our teac	ning college
, system provides supp	ortive teaching through a mixture of tutorials (gr	oups of 5 students) an	d workshops (groups o	of 20-25). These sessior	ns tackle conceptual di	fficulties and challenge	students to
construct arguments	and explain ideas to each other (PLO5,7). Writter	n pre-work helps stude	nts assess their under	standing and writing sk	ills, and develop probl	em solving skills (PLO1,	5). Laboratory
work is supported by	academic and technical staff as well as postgradu	uates who teach, (PGW	/Ts). Guidance is focus	ed on developing safe v	working practices, goo	d laboratory protocols,	effective
manipulations of equ	ipment and instrumentation, and a deeper under	rstanding of the skills n	eeded to analyse data	and to design investiga	ations in preparation f	or research (PLO3,4,6).	
ii) Students' independe	nt study and formative work				· ·		
Please outline key feat	ures of how independent study and formative work h	as been designed to sup	port the progressive ach	ievement of the program	me learning outcomes. (For example, the use of o	online resources, which
may also incorporate fo	rmative feedback; opportunities for further learning	from work-based placem	ients).				
The programme has b	been designed with our small-group college teach	ning system at its core.	It is our belief (and co	mprehensively evidenc	ed through student ev	aluations) that these ad	tivities are central
to student learning ar	nd skill development. The majority of students' in	dependent work and f	ormative assessment	is associated with small	group teaching (PLO1	,2,5,7). Laboratory wor	k in Year 1 focuses
on developing laborat	tory skills. Weekly assessment is formative with o	occasional summative a	assessments being use	d to evaluate levels of o	competence. The focus	s of assessment will shi	t from rewarding
attendance and repor	t submission in favour of directly assisting the ac	quisition and demonst	ration of key laborato	ry skills (PLO3-7). Taugh	nt material in Year 4 is	delivered as blended le	arning for all
students whether in Y	ork, on the Year in Industry or Year Abroad prog	rammes. This approact	n prepares students fo	r career development,	self-study and PDP cor	isistent with the postgr	aduate level
where higher learning	g is often divorced from formal lecture programm	nes (PLO7).					
III) Summative Assessme	ent amative assessment within and across modules has h	oon designed to support	and ovidence the progr	assive achievement of the	programme learning of	itcomes (For example th	a use of different
assessment methods at	the 'introduction' stage compared to those used to the	evaluate deeper learning	through the application	of skills and knowledge la	ater in the programme).	itcomes. (i or example, ti	
Summative assessme	nt through exams remains key to testing PLOs 1 a	& 2 and builds directly	on the formative asse	ssment of work submitt	ted in connection with	supporting tutorials an	d workshops.
Some assessment in Y	ear 1 will be conducted through the use of MCQ	, which allow the conv	enient assessment of a	a wide range of essentia	al core materiial (PLO1). More traditional writ	ten answers will
be retained to test wr	iting skills and provide preparation for convention	onal examinations in la	ter years. The Departn	nent makes use of vario	ous forms of continuou	s assessment that redu	ce the burden of
formal exams and allo	ow complementary skills to be developed and as	sessed. As in the currer	nt course, higher years	(Yrs 2-4) will be assess	ed summatively throu	gh traditional core exar	ns (and assessed
workshops) (PLO1), o	ntion exame (and assessed workshops) ($PIO2$) n	ractical work (through		· · ·		-	
1	ption exams (and assessed workshops) (FEOZ), p	ractical work (through	in-lab (PLO3) and post	-lab assessment (PLO4,	,5), project work/repoi	rts (PLO3,4,5,6) and gro	up

8. Contribution of staff

Plazca Salact V/N+ Vac

8.a. Please outline (where applicable) the contribution of Postgraduate who Teach (PGWTs) to the programme. The programme must comply with the University Policy on PGWTs (http://www.york.ac. uk/admin/hr/managers/casual_workers/pgwt/#tab1) and PGWTs must be involved in the monitoring and review of the programme.

PGWTs are principally involved in support and delivery of laboratory teaching. They play a direct role in teaching aspects of experimental and instrumental technique to students and advising them on data collection and interpretation particularly in the area of spectroscopy. This is achieved through a combination of participation in teaching sessions, formative assessment and summative assessment based on closely defined, moderated mark schemes. PGWTs are encouraged to mentor students by making links between their own research and the activities students meet in a more didactic setting. They also play a key role in helping to maintain high H&S standards across all years and advising on aspects of experimental design for project execution in Yrs 3 & 4.

8.b. If casual teaching staff and/ or staff external to the University will be involved in delivery of the programme, please outline how they will contribute and how the programme team will ensure that

A number of external experts have contributed over recent years to the delivery of case studies in a number of options. This is expected to continue for the AF module. External contributors are targeted due to their specific technical knowledge and experience that is complementary to academic staff. They deliver sessions in the presence of York academic staff and are not directly involved in assessment. Student feedback is collected on external speakers and has often identified the advantageous impact of these sessions.

9. Study Abroad (including Year Abroad as an additional year and replacement year)

if No move to section 10

Students on all programmes may apply to spend Stage 2 on the University-wide North America/ Asia/ Australia student exchange programme. Acceptance onto the programme is on a competitive basis. https://www.york.ac.uk/staff/teaching/procedure/programmes/design/_____

9.a.Will the department need to agree new	n/ additional study abroad parts	nerships in order	to offer this programme?
Please Select Y/N: No			
9.b.Please briefly detail the nature of the s	study abroad (tick and/ or provi	de additional det	ail as appropriate):
i) Is it an additional/ replacement year?		replacement year	
Additional details:			
Year 4 of the MChem integrated masters ca	an be spent in York, on industrial	placement or uno	der existing arrangements at a range of overseas partner universities. The structure of the year is essentially
the same comprising M-level study of an in-	dependent research project (90	credits), a literatu	re review module (10 credits) and open-learning advanced topics (20 credits).
1 0 /			
		antional alamant	
 Is it compulsory/ optional element of the pro 	gramme? (please select)	optional element	
Additional details:			
Students finalise their choice of Year 4 route du	ring Year 3.		
iii) If it is an additional year, is it direct entry/ tr	ansfer in? (please select)		
Additional details:			

n/a

iv) How will students taking Study Abroad be assessed?

The 10-credit literature review module is assessed independently through the written review and reference list by two academic staff in York (the review topic being linked naturally to the project). The same pair of assessors mark the project report, accounting for 40% of the 90-credit project module mark, and assess the accompanying oral presentation and viva (with project-specific and synoptic elements) in York at the end of the year, accounting for a further 25%. The remaining 35% of the project module mark comes from a project execution mark that is generated by the project supervisor in the overseas university. All marking follows closely defined mark schemes and project execution marks are moderated by the Department's Yr Abroad officer and the Chair BoE. The 20-credit open learning module is assessed in the Summer common assessment period through a written exam, covering the open-learning-delivered M-level advanced topics and underlying synoptic knowledge both linked to the study of a selection of recently produced York research papers. Students must answer a question on three different topics.

v) Can it be reassessed? (please select Y/N)	Yes	Explain how:
Explain how:		

Resits are available for the open learning module. The lit review can be re-submitted. The project report can be re-submitted in the University-defined case of a marginal fail.
vi) If a student fails the Study Abroad which programme will they transfer onto or will they leave the University?
Students graduate with a BSc Hons degree based on their results at the end of Year 3.
vii) How will the programme team manage the risks associated with offering Placement Learning and Study Abroad?
The Department has many years experience of running both placement and study abroad MChem degrees under former programmes. We have separate members of staff monitoring both programmes
during recruitment (to placement or year abroad) and execution. Academic staff supervise both types of project in collaboration with a 'local' supervisor and this includes a site visit and a mid-year
interim meeting in York (the latter only in the case of placements). Partner institutions and industries are rigorously vetted before being admitted to either scheme because of the specific M-level
requirements of York placements. We have built up a formidable list of regular destinations featuring companies and universities who are familiar with our working practices.
10. Work-based learning (including years in industry)
It is strongly recommended that departments that do not already have an established work-based learning programme should contact Careers for help and advice.
10.a. Does the programme include the opportunity to undertake work-based learning/ placements, including years in industry? All such programmes must comply with the policy on work-based
https://www.york.ac.uk/staff/teaching/procedure/programmes/design/
This should include the signing of learning agreements between the student, department and work-place
Please Select Y/N: Yes if No move to section 11
i) Is it a compulsory or optional element of the programme?
Please Select: optional
ii) Briefly detail the nature of the work-based learning:
Year 4 of the MChem integrated masters can be spent in York, on industrial placement or under existing arrangements at a range of overseas partner universities. The structure of the year is essentially
the same comprising M-level study of an independent research project (90 credits), a literature review module (10 credits) and open-learning advanced topics (20 credits). On industrial placement, the
90-credit research project is conducted within the placement company in the area of its operations. In some cases, the project covers the day-to-day work of the student within the company; in others,
the company allows the student to complete the required amount of research in addition to their more routine role within the placement.
iii) Who will be responsible for sourcing and arranging the placement: (please Student
Additional details:
Placements are obtained through a standard application/interview process in competition with students from around the country. The Department's strong connections with a significant number of
companies and reputation for providing strong performing placement students means that many companies target the Department specifically when recruiting. Running placements in Year 4 means
that York students are more knowledgeable and more mature than many from competitor departments.
iv) Is the work-based learning an additional year in industry?
Please Select Y/N: No if No move to section 10.b.
v) Is it direct entry/ transfer in? (please select)
Additional details:
N/A
vi) What will be the criteria for the selection of locations for work-based learning?

N/A

vii) How will the department ensure a sufficient number of work based learning enpartunities?
N/A
IV/A
N/A
iv) How will the denartment make students aware of their rights and responsibilities?
Ν/Δ
x) How will students taking a year in industry be assessed?
N/A
xi) Can it be reassessed?
Please Select Y/N:
if yes, please explain how:
N/A
xii) How will the programme team manage the risks associated with offering a year in industry?
N/A
10.b. For programmes involving other forms of work-based learning other to years in industrylt is strongly recommended that departments that do not already have an established work-based
All such programmes must comply with the policy on work-based learning and placements
https://www.york.ac.uk/staff/teaching/procedure/programmes/design/
This should include the signing of learning agreements between the student, department and work-place
i) What will be the criteria for the selection of locations for work-based learning?
The Department's Industrial Placement Officer ensures that all companies involved in the scheme have the facilities and scope within their daily operations to support an M-level research project in
addition to providing workplace experience. The companies must agree, subject to confidentiality agreements, that results can be reported by students in sufficient specific detail to allow objective
assessment of the project. Students cannot apply to placements outside the agreements established between Chemistry in York and existing company signatories to our agreements.

ii) How will the department ensure a sufficient number of work-based learning opportunities?

Our previous experience under existing programmes ensures that we have have established a working relationship with a wide range of companies in the UK and Europe. Companies demonstrate a loyalty to the Department based on their satisfaction with previous recruits. In recent years, the Department has regularly placed between 50 & 60 students. Whilst this is a smaller number than the number of students who register interest in the scheme end of Year 2, most students who actively pursue placements during Year 3 are successful in obtaining a placement.

iii) How will the department make work-based learning providers aware of their responsibilities?

Companies sign up to our existing placement scheme on the basis of an understanding of the way our integrated masters Year 4 placement scheme works. This negotiation will continue under the aegis of our Industrial Placement Officer.

iv) How will the department make students aware of their rights and responsibilities?

Students are briefed by the Department's Industrial Placement Officer on an individual basis immediately before the placement begins. There is also a placement handbook and an academic supervisor who oversees the placement from the York side.

v) How will students undertaking work-based learning be assessed?

The 10-credit literature review module is assessed independently through the written review and reference list by two academic staff in York (the review topic being linked naturally to the project). The same pair of assessors (a vi) Can it be reassessed?

Please Select Y/N: Yes

if yes, please explain how:

Resits are available for the open learning module. The lit review can be re-submitted. The project report can be re-submitted in the University-defined case of a marginal fail.

10.c. Support for students on work-based learning

i) How will students be briefed prior to, and de-briefed after, work-based learning?

Those students successful in securing industrial placements are centrally briefed by the Department's Industrial Placement Officer and will already have access to the placement Handbook. All students are individually briefed at the end of Year 3 prior to commencement of placements covering aspects of H&S, disclosure of disabilities and reminders of the expectations and assessment of the placement. All students are requested to submit a questionnaire at the end of the placement providing the opportunity to reflect on their experience during the year and provide feedback on the specific placement offered by their company.

ii) Who in the department will be responsible for overseeing students whilst they are undertaking work-based learning?

The Industrial Placement Officer (currently Dr Brian Grievson) will continue to oversee the Year in Industry scheme from advertising the scheme to students, liaising with companies to invite them to offer interviews inside the Department and provide links to external interviews and online applications, through to collecting feedback from students and reviewing the list of companies listed within the scheme. This involves working closely with the companies themselves. During the placements, students on placement have an industrial project supervisor within the company and an academic project supervisor from York.

iii) By what means (e.g. work-based mentors, VLE, ongoing communication with the department) will students be supported when undertaking work-based learning?

Placement students are visited on site by their academic project supervisor in the first rew months of placement and have email contact throughout. All students return to york for a formative
presentation/viva in the third week of Spring Term involving the academic project supervisor, an academic IPM and the industrial project supervisor. Future research plans are refined at this meeting.
Students send a draft of each of their literature review and final report for comment by the academic project supervisor prior to the submission of the final documents. Students are supported in the
workplace by the company's project supervisor and often by co-workers on site.
iv) How will any work-based mentors be trained and utilised?
N/A
N/A v) If mentors/employers are to be involved in assessment how will they trained, supported and monitored?
Industrial project supervisors complete a pro forma with detailed level descriptors in order to award a project execution mark to the student. These marks (35% of module mark) are moderated by the Department's appointed p
vi) How will work-based learning be monitored and reviewed?
Principally through the placement review conducted through student questionnaires and overseen by the Indistrial Placement Officer.
Careers & Placements - With Placement Year' programmes
Students on all undergraduate and integrated masters programmes may apply to spend their third year on a work-based placement facilitated by Careers & Placements. Such students would return to
In exceptional circumstances, UTC may approve an exemption from the 'Placement Year' initiative. This is usually granted only for compelling reasons concerning accreditation; if the Department

Overview of modules by stage

Notes:

[1] The credit level is an indication of the module's relative intellectual demand, complexity and depth of learning and of learner autonomy (Level 4/Certificate, Level 5/Intermediate, Level 6/Honours, Level 7/Masters)

[2] The credit value gives the notional workload for the module, where 1 credit corresponds to a notional workload of 10 hours (including contact hours, private study and assessment)

[3] Special assessment rules (requiring University Teaching Committee approval); P/F – the module marked on a pass/ fail basis (NB pass/ fail modules cannot be compensated); NC – the module cannot be compensated; NR – there is no reassessment

[4] Independent Study Modules (ISMs) are assessed by a dissertation or substantial project report. They cannot be compensated (NC) and are subject to reassessment rules which differ from 'taught modules'. Integrated Masters programmes may

Core & option	module table (a	add additional r	rows as required)						-	_
Stage	Core/ Option	New/	Module title	Module code	Credit	Credit	Prerequisites,	Assessment rules[3],[4]	Timing of module	Format, contribution to
									-	85% exam SpT and
	1 Core	Yes	Core 1: Fundamentals of Chemi	CHE00015C	4	30)		AuT	15% workshop AuT
										85% exam SuT and
	1 Core	Yes	Core 2: Chemical Properties and	CHE00016C	4	30	Core 1		SpT, SuT	15% workshop SpT
								The assessed component of the		
								self-study course		
								(Macromolecules) is a short video		
								or an article which would be		85% exam SuT and
								impractical to reassess and will not		15% tutorial SuT
	1 Core	Yes	Core 3: Molecules and Reaction	CHE00017C	4		Core 1	be of value for the students.	SpT, SuT	(Macromolecules)
								A diagnostic assessment of maths		
								skills is required (Wk2 AuT) as the		
								students need a certain level in		
								maths in order to cope with the		
								Chemistry course. The pass		
								threshold corresponds to the		
								lowest acceptable level. The		
								Department will provide support to		
								failing students throughout the first		
								term to help bring them to the		
								required level tested through re-		
								assessment (Wk9 Au1). The		
								questions for the test will be drawn		
								from a bank of questions so that		
								the test can be repeated several		
								times, if required.		
								The 'no reassessment' part is		00% 0
								assessed via presentations for		30% exam Sp1, 30%
	1 0	Vaa	Chille for Chamiata					which reassessment would be very	Veerlens	group presentation
	lore	res	Skills for Chemists	CHE00019C	4	10	1	impractical and of doubtful value.	I Year Long	AUT, 40% exam Sul

								The module is not marked on a		
								PASS/FAIL basis but it contains		
								in addition to the credit bearing		
								alemente e single D/E		
								assessment, which assesses each		
								student's ability to work safely in		
								the chemistry laboratory. This is		
								crucial for the practical work which		
								follows in subsequent years and		
								therefore marite a D/E accomment		
								inereiore ments a P/F assessment.		
								For students who fail this		
								assessment at the first opportunity,		
								special measures will be deployed,		
								including retraining, closer		
								supervision and multiple		
								apportunition to rotake the		
								opportunities to retake the		
								assessment during the Spring and		
								Summer terms.		
								The 'no reassessment'		
								components are laboratory		
								experiments. It is impractical to		
								put in place reassessment of this		
								work although it may be possible

								We view it as inappropriate to		
								reassess laboratory work because		
								any reassessment would not		
								provide a properly representative		
								assessment of the practical skills		
								of the student nor their		
								development during extended		
								periods of practical chemistry		
								courses. It also fails to properly		
								document their commitment to		
								practical chemistry, a component		
								that lies at the heart of		
								undergraduate chemistry training		
								and which constitutes a major part		
								of the Royal Society of Chemistry		
								accreditation process. In addition		
								it would be time-consuming,		
								expensive to resource and		
								challenging to organise		
								reassessments for every practical		
								component that we run across the		
								four years of the course. In order		
								to minimise the potential impact of		
								such a policy, we propose to follow		
								closely the development and		
								performance of all students across		
								each of their practical courses and		
								to define regular check points to		
								ensure that each student is		
								maintaining an adequate level of		
								performance. For special cases		
								where a student may miss the bulk		
								of or all of a practical course		
								through no fault of their own we		
								would devise a resit task to be		
								taken during the August resit		
								period. However, this would be		
								the exception rather than the rule		
								and organised on an ad hoc basis		
								The MChem mini-projects can be		30% practicals AuT
