

1. Admissions/ Management Information								
Title of the new programme – including any year abroad/ in industry variants See guidance on programme titles in Appendix V: https://www.york.ac.uk/media/staffhome/learningandteaching/documents/policies/Framework%20for%20Programme%20Design%20-%20UG.pdf								
Chemistry, the Atmosphere and the Environment								
Level of qualification								
Please select:		Level 7						
Please indicate if the programme is offered with any year abroad / in industry variants				Year in Industry Please select Y/N		Yes		
				Year Abroad Please select Y/N		Yes		
This document applies to students who commenced the programme(s) in:				2017-18				
Awarding institution				Teaching institution				
University of York				University of York				
Department(s): Where more than one department is involved, indicate the lead department				Board of Studies				
Lead Department		Chemistry		Chemistry				
Other contributing Departments:								
Interim awards available Interim awards available on undergraduate programmes (subject to programme regulations) will normally be: Certificate of Higher Education (Level 4/Certificate), Diploma of Higher Education (Level 5/Intermediate), Ordinary Degree and in the case of Integrated Masters the Bachelors with honours. Please specify any proposed exceptions to this norm.								
Certificate of Higher Education (Level 4/Certificate), Diploma of Higher Education (Level 5/Intermediate), Ordinary Degree, Bachelors with honours.								
UCAS code				Route code(existing programmes only)				
F143 (year abroad), F144 (year in industry), F145 (year in York)								
Admissions criteria								
A-level in Chemistry or equivalent								
Length and status of the programme(s) and mode(s) of study								
Programme	Length (years)	Status (full-time/part-time)	Start dates/months (if applicable – for programmes that have multiple intakes or start dates that differ from	Mode				
				Face-to-face, campus-based		Distance learning		Other
MChem	4	Full-time	n/a	Please select Y/N	Yes	Please select Y/N	No	Some distance learning (20 credits) is undertaken during Year 4
Language(s) of study								
English								
Language(s) of assessment								
English								
2. Programme accreditation by Professional, Statutory or Regulatory Bodies (PSRB)								
2.a. Is the programme recognised or accredited by a PSRB								
Please Select Y/N: Yes		if No move to section 3 if Yes complete the following questions						
2.b. Please provide details of any approval / accreditation event needed, including: timescales, the nature of the event, central support / information required:								

All existing programmes are accredited by the Royal Society of Chemistry (PSRB) and future design and development need to be considered within this accreditation framework (http://www.rsc.org/Education/courses-and-careers/accredited-courses/). Full accreditation for the new courses was obtained from the RSC in April 2017.		
2.c. Does/ will approval or recognition require exceptions to University rules/practices? Please select Y/N	No	if Yes, provide details
N/A		
2.d. Any additional information (e.g. student attainment required to achieve accreditation) that are required by the PSRB should be recorded here		
N/A		
3. Additional Professional or Vocational Standards		
Are there any additional requirements of accrediting bodies or PSRB or pre-requisite professional experience needed to study this programme?		
Please Select Y/N:	No	if Yes, provide details
N/A		
4. Programme Leader		
4.a. Please name the programme leader for the year to which the programme design applies and any key members of staff responsible for designing, maintaining and overseeing the programme.		
<p>Programme leader - Nigel Lowe. The programme is currently overseen by Nigel Lowe as Chair of Departmental Teaching Committee (DTC) and Victor Chechik as Chair of the Board of Studies (BoS). Design of the new course has been an iterative process dating back to feedback from staff and students about the complication and workload of the post-modular course over the preceding 3 years. External Review (2016) and Periodic Review (2015-16) also focused on issues linked to the large number of 10-credit options in the post-modular course. York Pedagogy (YP) provided a framework to address these issues and the opportunity to re-evaluate the content and skills we deliver in our undergraduate programmes and how progress through the stages is delivered and assessed. Initially, YP was handled by Michael Rogers with design of the new course led by Jason Lynam (as Chair DTC) and Victor Chechik (Chair BoS). Module coordinators were consulted to ensure, for instance, that new 20-credit options aligned with current expertise in the department and to write detailed descriptors for each new module. Consultation through DTC set aspirations around assessment (e.g. continuous assessment versus examination) and the key Programme Learning Outcomes were debated and refined. Draft programme design documents were presented at BoS at the end of June with formal BoS approval scheduled for BoS 9/11/16.</p>		
4.b. How are wider stakeholders such as professional bodies and employers involved in the design of the programme and in ongoing reflection on its effectiveness?		
The programme is monitored through initial accreditation and re-accreditation on a 5-year cycle through the Royal Society of Chemistry. Employer overview is achieved through the Department's External Advisory Group comprising academic and sector employer representatives. Advice from External Examiners has been solicited during preparation for approval.		
5. Purpose and learning outcomes of the programme		
5.a. Statement of purpose for applicants to the programme		
<p>Our degree is constructed to train the next generation of chemists, taking students deep into the subject and up to the forefront of cutting-edge chemical research. We focus on showing applications of fundamental chemistry, and providing practical training in a state-of-the-art facility. We undertake to develop the full range of skills in a chemistry context, from communication and team-working to scientific literacy and problem solving, so students will be ideally prepared for a PhD position, research in industry, a career in teaching, or other high-quality graduate-level work, as reflected in our strong final destination statistics. The course is delivered with a strong focus on small group teaching and choice between bachelors and masters programmes with specialisation into three 'Chemistry with' courses in addition to 'Chemistry'. 'Chemistry with' courses follow a distinct pathway through our specialised (rather than core) modules; all these are optional modules on the generic Chemistry courses and the flexibility students have to switch between named and generic courses (up to the end of Year 2, and provisional on achieving the 55% threshold required to access Year 3 MChem) means that any student can choose any specialised module provided they concomitantly change course. 'Chemistry, the Atmosphere and the Environment' describes a 4-year course with defined specialised topics in Year 2 (20 credits), Year 3 (20 credits) and Year 4 (20 credits) and a fourth year spent using York's modern research facilities, at one of our partner overseas universities, or on industrial placement in one of the UK's largest chemistry placement schemes pursuing a research project related to biological or medicinal chemistry. As the 4-year MChem takes students to the research frontier of modern, interdisciplinary chemistry, it is the natural choice for academic and commercial careers in the subject; the 3-year BSc, with its more even balance of chemistry-specific content and general skills training, is the natural choice to launch careers in a wide range of graduate professions.</p>		

5.b. Programme Learning Outcomes Please provide six to eight statements of what a graduate of the programme can be expected to do. Taken together, these outcomes should capture the distinctive features of the programme. They should also be outcomes for which progressive achievement through the course of the programme can be articulated, and which will therefore be reflected in the design of the whole programme.	
PLO	On successful completion of the programme, graduates will be able to:
1	demonstrate learning and problem solving skills through the acquisition and application of a broad range of fundamental and advanced chemical principles and knowledge.
2	apply fundamental and advanced chemical principles and knowledge to the in-depth study of chemical science specialisms, relating to atmospheric and environment-related chemistry and the solution of problems at the forefront of the subject.
3	design and safely conduct chemical experiments through an effective risk assessment. Accurately document and record experiments to enable the effective synthesis of complex chemical compounds and advanced analysis of physical measurements, of both a quantitative and qualitative nature.
4	interpret experimental data by using mathematical skills, advanced chemical knowledge, information technology and scientific conventions.
5	effectively articulate scientific principles, experimental results and research findings in a way that is accessible to a variety of audiences through written, oral and other formats.
6	independently plan, design and conduct an extended, open-ended investigative research project to extend knowledge and understanding at the forefront of the chemical sciences in an area related to atmospheric or environment-related chemistry.
7	demonstrate employability skills such as teamworking, commercial awareness, self-management and creativity and be equipped to work in a professional manner in their future careers consistent with the expectations of a research chemist in academic, governmental or commercial positions.
8	
5.c. Programme Learning Outcome for year in industry (where applicable) For programmes which lead to the title 'with a Year in Industry' – typically involving an additional year – please provide either a) amended versions of some (at least one, but not necessarily all) of the standard PLOs listed above, showing how these are changed and enhanced by the additional year in industry b) an additional PLO, if and only if it is not possible to capture a key ability developed by the year in industry by alteration of the standard PLOs. (See also section 10)	
For the Year in Industry PLO 6 is modified to independently plan, design and conduct an extended, open-ended investigative research project in an industrial environment to extend knowledge and understanding at the forefront of the chemical sciences in an area related to atmospheric or environment-related chemistry.	
5.d. Programme Learning Outcome for year abroad programmes (where applicable) For programmes which lead to the title 'with a Year Abroad' – typically involving an additional year – please provide either a) amended versions of some (at least one, but not necessarily all) of the standard PLOs listed above, showing how these are changed and enhanced by the additional year abroad or b) an additional PLO, if and only if it is not possible to capture a key ability developed by the year abroad by alteration of the standard PLOs. (See also section 11)	
For the Year Abroad PLO 6 is modified to independently plan, design and conduct an extended, open-ended investigative research project at an overseas university to extend knowledge and understanding at the forefront of the chemical sciences in an area related to atmospheric or environment-related chemistry.	
5.e. Explanation of the choice of Programme Learning Outcomes Please explain your rationale for choosing these PLOs in a statement that can be used for students (such as in a student handbook). Please include brief reference to:	
i) Why the PLOs are considered ambitious or stretching?	
The PLOs describe a journey from consolidating basic chemical principles at the start of the course through to contributing to cutting-edge research in core and interdisciplinary chemistry at the end. The range of formative learning experiences in lecture, laboratory, workshop and tutorial, allied to independent work in individual and group settings, provide a structured training to meet the aspiration of the PLOs. The summative assessment points, including formal examinations, assessed presentations and extended research projects, allow the achievement of the knowledge, skills and attributes of the PLOs to be demonstrated.	
ii) The ways in which these outcomes are distinctive or particularly advantageous to the student:	
The outcomes are advantageous as they ensure that the research-led teaching of chemical science is integrated with the development of laboratory, problem solving and employability skills. This will ensure that the York Chemist has all the technical and employability skills needed in his/her future career regardless of whether this career lies inside or outside the chemical sciences. The PLOs remind students that the course provides an education through chemistry as well as an education in chemistry. The year 4 experience in particular (PLO6) makes the MChem ideal preparation for those thinking of careers in chemistry whether in industry or further study in academia.	
#]	

Chemistry students develop effective communication and related skills through regular application of digital literacy skills. In Year 1, students will give an oral presentation and prepare a team poster on a practical project involving presentation software and specialist molecular drawing packages including the use of molecular graphics with the Protein Data Bank (PDB). They also carry out a public communication of science exercise, producing a popular science article or YouTube video aimed at explaining an application of polymer science. Some student videos have had thousands of views globally and been highlighted by international chemistry magazines. In Year 2, communication skills are enhanced by the smartphone video recording and sharing of group presentations and feedback thereon. Students use specialist software and databases used to visualise proteins and to calculate properties of small molecules. Year 3 focuses on scientific report-writing consistent with research publications through effective use of search tools and databases to access research literature. Computational approaches continue to include applications of quantum chemistry. Data manipulation and analysis in laboratory work frequently involve the use of scientific software, with appropriate training. In Year 4, open learning is supported by technology-enhanced learning tools. The Department makes near comprehensive use of lecture recording, and all modules are supported by material on the VLE including screencasts, external links and quizzes, with pockets of use of 'flipping' and 'clicker' technology. The VLE is exploited variously for online workflow management including submission of summative assessments.

iv) How the PLOs support and enhance the students' employability (for example, opportunities for students to apply their learning in a real world setting)?
The programme's employability objectives should be informed by the University's Employability Strategy:

<http://www.york.ac.uk/about/departments/support-and-admin/careers/staff/>

At the start of Year 1, students take part in 'The Happening' – a fun, industrially-led event, in which they get to know other students as they work in teams to solve a real-world chemical problem. In Year 1, they also carry out Integrated Chemistry Team Practical Projects in which the contents of a 'typical' night out are analysed – junk food, alcohol and a 'morning-after' coffee, to determine levels of fat, protein, alcohol, sugar and caffeine. This develops research, time-management and team-working skills. In Year 2, these ideas of team-working are developed much further in the 'Group Exercises', in which they work in smaller teams in a mock industrial company to solve a real-world chemistry problem. The suite of exercises covers various aspects of the chemical and related industries, the development of which was supported by the industries themselves. Having to organise meetings, keep minutes and consider financial implications also helps develop business skills. Year 3 research-focused Miniprojects introduce the planning of open-ended research – only by collaborating effectively as part of a group can students achieve an optimal understanding of the complex topic they are studying – exactly as in modern interdisciplinary research. Chemistry at York is an Athena Swan Gold department, and we foster an inclusive atmosphere, particularly through our team-working exercises, in which students will be encouraged to recognise the contributions of all the diverse members of their team.

v) Consultation with Careers

The programme proposal should be discussed with Careers (tom.banham@york.ac.uk, ext. 2686)

Please provide details of Careers' comments and your response.

The Department has a dedicated Careers Liaison Officer who works closely with the Industrial Placement Coordinator to circulate information and opportunities to students and to deliver training through CV Writing and Interview Skill workshops. These are delivered in collaboration with staff from Careers. The new course will retain the current links to, and involvement of, Careers from the current course. For this reason, we have not consulted directly with the Careers service during the planning of the new course.

vi) How will students who need additional support for academic and transferable skills be identified and supported by the Department?

The Department has two principal mechanisms for identifying students who require additional support. Firstly, any student whose assessment results are either poor or failing are identified by the appropriate examinations officers and then written to by the Chair of the Board of Studies and counselled by their supervisors. These students will meet with the Student Welfare Officer and their supervisors and a personal learning plan developed. Secondly, the need for individual support is identified through our college teaching system where progress is monitored weekly. Student supervisors review progress at the end of term meetings and any actions identified. All new students are assigned a mentor who is studying in a higher year in the same chemistry college as them. These mentors can provide advice on a range of social issues, such as preparing for arrival at university, settling into York or finding good student houses in the second year, as well as on academic issues such as option module choices. Furthermore, there are centrally-timetabled revision classes, run by the mentors, to provide academic peer-to-peer support to the benefit of mentees and mentors. This scheme demonstrates how our chemistry college system helps to break down barriers and enables students to make personal connections across a large chemistry department.

vii) How is teaching informed and led by research in the department/ centre/ University?

The Department of Chemistry has a research-led teaching philosophy. Although most of the core material in Years 1 and 2 is common in UK Chemistry Departments, in Year 3 material aligns with the research specialisms in the Departments. Furthermore, the option module structure has been specifically designed to reflect the research expertise in the Department with courses on environmental, sustainable, analytical and biological/medicinal chemistry as well as options on mechanistic chemistry and advanced spectroscopy.

5.f. Stage-level progression Please complete the table below, to summarise students' progressive development towards the achievement of PLOs, in terms of the characteristics that you expect students to demonstrate at the end of each year. This summary may be particularly helpful to students and the programme team where there is a high proportion of option modules.

Note: it is not expected that a position statement is written for each PLO, but this can be done if preferred (please add information in the 'individual statement' boxes). For a statement that applies across all PLOs in the stage fill in the 'Global statement' box.

Stage 0 (if your programme has a Foundation year, use the toggles to the left to show the hidden rows)

Stage 1

On progression from the first year (Stage 1), students will be able to:

demonstrate an understanding of core chemical principles that will underpin studies at subsequent stages (PLO1). By working through guided activities in our laboratories, students will also have acquired key laboratory skills for the synthesis and analysis of chemical compounds (PLO3) and had experience of acquiring, recording, processing and analysing physical data (PLO4). Students will also have developed the key quantitative, mathematical and IT skills needed for further study (PLO4) through 'Skills for Chemists' and self-directed, independent learning including, for example, the use of Excel in linear regression analysis. Students will begin to acquire investigative (PLO6) and communication (PLO5) skills through the ICP lab-based activity, and communication skills in a range of media developed in the 'Macromolecules' self-study package. Personal skills (PLO7) are developed through small-group teaching environments, through group work in laboratories and 'Becoming a Professional Chemist' presentations and through 'The Happening' activity.

PLO 1	PLO 2	PLO 3	PLO 4	PLO 5	PLO 6	PLO 7	PLO 8
Individual statements							

Stage 2

On progression from the second year (Stage 2), students will be able to:

demonstrate an understanding of chemical principles at an intermediate level and how they may be applied to solve unseen, complex problems that begin to challenge basic theories (PLO1). Through the teaching of 20 credits of option modules, they will gain a more detailed knowledge of aspects of chemical science specialisms with the added complexity of interdisciplinarity (PLO2). The Advanced Synthesis laboratory course will develop techniques necessary to handle sensitive and potentially hazardous materials in a controlled manner (PLO3) whilst physical chemistry practical work brings a deeper consideration of data acquisition and analysis involving the use of software in processing (including the use of Excel in non-linear regression analysis) and presentation (PLO4, PLO5) and simulation of experiments to inform experimental design in Hammett Lab (PLO6). Awareness and practice of employability skills with a view to developing future career paths (PLO7) continue to be developed through tutorial and workshop teaching and by collaboration in laboratory work. Intermediate levels of written and oral communication (PLO5) and teamworking skills (PLO7) are developed through the Year 2 Group Exercises and the focus on employability (PLO7) sharpened through Interview Skills and CV Writing workshops.

PLO 1	PLO 2	PLO 3	PLO 4	PLO 5	PLO 6	PLO 7	PLO 8
Individual statements							

Stage 3

<p>(For Integrated Masters) On progression from the third year (Stage 3), students will be able to:</p>	<p><i>demonstrate an understanding of complex chemical principles, recent developments and applications in the field from a research-led perspective (PLO1). Through the study of a further 40 credits of option modules, students will advance their knowledge of science specialisms (PLO2) engaging with the forefront through research literature and problem solving. Students will learn advanced laboratory techniques including inert atmosphere manipulations and handling catalytic reactions, and analyse reactions through the application of spectroscopy during the Advanced Practicals (PLO3). They will have performed investigative research projects involving the design and implementation of novel experiments which require direct engagement with the primary chemistry literature (PLO6) and advanced analysis of data (PLO4) from a wide range of instrumental analytical techniques during the Miniprojects. Presentation (written, oral and poster) skills (PLO5) will have been enhanced through the reporting of Advanced Practicals and Miniprojects, and engagement with experimental design and the interpretation of research literature further developed (PLO6). Collaborative skills and interpersonal communication skills continue to be developed through tutorial/workshop teaching and especially through the group Miniproject investigative project work (PLO7). Additionally, at graduation, MChem students will demonstrate an understanding of complex chemical principles, recent developments and applications in the field from a research-led perspective through studying advanced and synoptic elements of chemistry through Open Learning (PLO1,2) engaging with the forefront through research literature and problem solving. Students will learn advanced laboratory and research techniques (PLO3) through MChem research projects involving the design and implementation of novel experiments which require direct engagement with the primary chemistry literature (PLO6) and potentially advanced analysis of data (PLO4) from a wide range of instrumental analytical techniques. Presentation (written, oral) skills (PLO5) will have been enhanced through the reporting of MChem projects, and engagement with experimental design and the interpretation of research literature further developed (PLO6). Collaborative skills and interpersonal communication skills continue to be developed through MChem project work within research groups, with the possibility that this is conducted in industry (Yr Ind) or at an overseas university (Yr Abr) (PLO7).</i></p>
---	--

PLO 1	PLO 2	PLO 3	PLO 4	PLO 5	PLO 6	PLO 7	PLO 8
<i>Individual statements</i>							

5.g. Other features of the programme

i) Distance Learning
Does the programme involve distance learning:

Please Select Y/N:	No	if Yes, you are required to submit to Teaching Committee: Checklist for Distance Learning Programmes
--------------------	----	---

ii) Involvement of partner organisations
Are any partner organisations involved in the delivery of the programme?

Please Select Y/N:	No	if Yes, outline the nature of their involvement (such as contributions to teaching, placement provision). Where appropriate, see also the: University guidance on collaborative provision
--------------------	----	--

N/A

iii) Internationalisation/ globalisation
How does the programme promote internationalisation and encourage students to develop cross-cultural capabilities?

The Department regularly recruits a small but significant number of undergraduates from around the world. The make-up of our academic staff and especially our large international postgraduate cohort create an appropriately supportive atmosphere. The postgraduate-led 'Chemical Interactions' society runs a number of events during the year to which all staff and student members are invited and these are often run along internationally-themed lines. We regularly host Erasmus students within Chemistry modules and our Yr Abroad scheme places ca. 15 Year 4 students annually in partner universities around the world.

iv) Inclusivity
How will good practice in ensuring equality, diversity and inclusion be embedded in the design, content and delivery of the programme?

[This refers to the protected characteristics and duties on the University outlined in the Equality Act 2010](#)

With over 10 years of accreditation at Gold level under the Athena SWAN scheme, the Department is justifiably proud of its record in this area. In addition to a Student Welfare Officer, the Department has identified a Disability Officer, a Women's Officer, a Study Skills Officer and a Harassment Officer. Additionally, a number of staff and students have contributed articles and participated in events focusing on LGBT contributions to the discipline. We maintain a quiet room/prayer room for the use of staff and students. An Equality & Diversity session on inclusivity/unconscious bias is part of the Year 1 'Becoming a Professional Chemist' activity emphasising its importance to teamworking in the modern workplace. The Department participates actively in the Widening Participation initiative through targeted admission and outreach activities involving schools not traditionally supplying York with Chemistry undergraduates.

v) Summer term weeks 8-10

Please summarise the activities that students will be expected to undertake during Weeks 8-10 of the Summer Term in each stage of the programme.

This period is home to our ICP laboratory-based group research projects at the end of Year 1 and to the Group Exercise and Career-focused activities of Year 2. Currently, there are no timetabled activities in this slot at the end of Year 3 not least because up to a third of the cohort may be actively preparing to take up industrial placements or to commence study overseas in Year 4.

6. Reference points and programme regulations

6.a. Relevant Quality Assurance Agency benchmark statement(s) and other relevant external reference points Please state relevant reference points consulted (e.g. Framework for Higher Education Qualifications, National Occupational Standards, Subject Benchmark Statements or the requirements of PSRBs): See Undergraduate Modular Scheme: Framework for Programme Design:

<https://www.york.ac.uk/media/staffhome/learningandteaching/documents/policies/Framework%20for%20Programme%20Design%20-%20UG.pdf>

<http://www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/subject-benchmark-statements>

<http://www.qaa.ac.uk/publications/information-and-guidance/publication?PubID=2843#.VthM1fmLS70>

The PLOs were designed to capture the spirit of York Pedagogy whilst retaining the scope of the national subject benchmark statements for chemistry and, for accreditation purposes, the requirements for breadth and depth of coverage specified by the Royal Society of Chemistry.

6.b. University award regulations

The University's award and assessment regulations apply to all programmes: any exceptions that relate to this programme are approved by University Teaching Committee and are recorded at the end of this document.

6.c. Are students on the programme permitted to take elective modules?

(See: <https://www.york.ac.uk/media/staffhome/learningandteaching/documents/policies/Framework%20for%20Programme%20Design%20-%20UG.pdf>)

Please Select Y/N: Yes

7. Programme Structure

7.a. Module Structure and Summative Assessment Map

Please complete the summary table below which shows the module structure and the pattern of summative assessment through the programme.

'Option module' / 'Option from list x' can be used in place of a specific named option. If the programme requires students to select option modules from specific lists these lists should be provided in the next section (7.b).

From the drop-down select 'S' to indicate the start of the module, 'A' to indicate the timing of each distinct summative assessment point (eg. essay submission/ exam), and 'E' to indicate the end of the module (if the end of the module coincides with the summative assessment select 'EA'). It is not expected that each summative task will be listed where an overall module might be assessed cumulatively (for example weekly problem sheets).

If summative assessment by exams will be scheduled in the summer Common Assessment period (weeks 5-7) a single 'A' can be used within the shaded cells as it is understood that you will not know in which week of the CAP the examination will take place.

Synthesis - from Nature to the Lab (CHE00034M)	Analytical & Forensic Chemistry (CHE00035M)						
Chemical and Synthetic Biology (CHE00037M)	Bioinspired Chemistry (CHE00033M)						
Chemical Theory & Computation (CHE00032M)	Lasers in Chemistry (CHE00036M)						

7.c. Explanation of the programme and assessment designThe statements should be in a form that can be used for students (such as in a student handbook). It should make clear to students why they are doing the key activities of the programme, in terms of reaching the PLOs.

i) Contact with staff

Please explain how the programme's design maximises the value of students' contact time with staff (which may be face-to-face, virtual, synchronous or asynchronous), including through the use of technology-enhanced learning. For example, giving students resources for their independent study which then enables a class to be more interactive with a greater impact on learning.

Students meet our internationally recognised researchers through lectures, small group tutorials/workshops and laboratory sessions. Lectures deliver information (PLO1,2) but much more with demonstrations, interactive problem solving (e.g. with access to model kits) and illustrative examples from academic and "real-world" contexts. Some staff use 'flipped' material and 'clickers' to enhance interactivity. Typical support materials used include quizzes, extra links and screen-casts on the VLE, with links to Twitter and YouTube. Small group learning through our teaching college system provides supportive teaching through a mixture of tutorials (groups of 5 students) and workshops (groups of 20-25). These sessions tackle conceptual difficulties and challenge students to construct arguments and explain ideas to each other (PLO5,7). Written pre-work helps students assess their understanding and writing skills, and develop problem solving skills (PLO1,5). Laboratory work is supported by academic and technical staff as well as postgraduates who teach, (PGWTs). Guidance is focused on developing safe working practices, good laboratory protocols, effective manipulations of equipment and instrumentation, and a deeper understanding of the skills needed to analyse data and to design investigations in preparation for research (PLO3,4,6).

ii) Students' independent study and formative work

Please outline key features of how independent study and formative work has been designed to support the progressive achievement of the programme learning outcomes. (For example, the use of online resources, which may also incorporate formative feedback; opportunities for further learning from work-based placements).

The programme has been designed with our small-group college teaching system at its core. It is our belief (and comprehensively evidenced through student evaluations) that these activities are central to student learning and skill development. The majority of students' independent work and formative assessment is associated with small group teaching (PLO1,2,5,7). Laboratory work in Year 1 focuses on developing laboratory skills. Weekly assessment is formative with occasional summative assessments being used to evaluate levels of competence. The focus of assessment will shift from rewarding attendance and report submission in favour of directly assisting the acquisition and demonstration of key laboratory skills (PLO3-7). Taught material in Year 4 is delivered as blended learning for all students whether in York, on the Year in Industry or Year Abroad programmes. This approach prepares students for career development, self-study and PDP consistent with the postgraduate level where higher learning is often divorced from formal lecture programmes (PLO7).

iii) Summative Assessment

Please outline how summative assessment within and across modules has been designed to support and evidence the progressive achievement of the programme learning outcomes. (For example, the use of different assessment methods at the 'introduction' stage compared to those used to evaluate deeper learning through the application of skills and knowledge later in the programme).

Summative assessment through exams remains key to testing PLOs 1 & 2 and builds directly on the formative assessment of work submitted in connection with supporting tutorials and workshops. Limited past papers are made available to reinforce exam preparation, and feedback and outline answers to all exams are provided to consolidate learning at the end of modules. The Department makes use of various forms of continuous assessment that reduce the burden of formal exams and allow complementary skills to be developed and assessed. Continuous assessment types include open-book and 'closed' assessed workshops (PLO1,2,4), assessed presentations and/or written assignments (PLO1,2,5), including group work (PLO1,2,7), and project-type work (PLO1,2,4,6). Practical skills are summatively assessed through measures of in-lab competence (PLO3) and related post-lab (written) assignments (PLO4,5), and project work through reports (PLO3,4,5,6) and group exercises/presentations/posters/assorted multimedia output (PLO4,5,7).

8. Contribution of staff

8.a. Please outline (where applicable) the contribution of Postgraduate who Teach (PGWTs) to the programme. The programme must comply with the University Policy on PGWTs (http://www.york.ac.uk/admin/hr/managers/casual_workers/pgwt/#tab1) and PGWTs must be involved in the monitoring and review of the programme.

PGWTs are principally involved in support and delivery of laboratory teaching. They play a direct role in teaching aspects of experimental and instrumental technique to students and advising them on data collection and interpretation particularly in the area of spectroscopy. This is achieved through a combination of participation in teaching sessions, formative assessment and summative assessment based on closely defined, moderated mark schemes. PGWTs are encouraged to mentor students by making links between their own research and the activities students meet in a more didactic setting. They also play a key role in helping to maintain high H&S standards across all years and advising on aspects of experimental design for project execution in Yrs 3 & 4

8.b. If casual teaching staff and/ or staff external to the University will be involved in delivery of the programme, please outline how they will contribute and how the programme team will ensure that individuals are adequately supported and monitored.

A distinction should be drawn between those staff for whom the University can accept responsibility as internal examiners (i.e. continuing employees) and those for whom it cannot (i.e. casual teaching staff, persons not employed by the University). Those in the latter category may be involved in assessing and in advising an internal examiner on the mark to be awarded; in every such case, however, the internal examiners will be required to 'second mark' the work concerned and be formally responsible for the marks awarded (Guide to Assessment, Standards, Marking and Feedback sec. 17).

A number of external experts have contributed over recent years to the delivery of case studies in a number of options. This is expected to continue for the AF module. External contributors are targeted due to their specific technical knowledge and experience that is complementary to academic staff. They deliver sessions in the presence of York academic staff and are not directly involved in assessment. Student feedback is collected on external speakers and has often identified the advantageous impact of these sessions.

9. Study Abroad (including Year Abroad as an additional year and replacement year)

Students on all programmes may apply to spend Stage 2 on the University-wide North America/ Asia/ Australia student exchange programme. Acceptance onto the programme is on a competitive basis. Marks from modules taken on replacement years count toward progression and classification.

Does the programme include the opportunity to undertake other formally agreed study abroad activities? All such programmes must comply with the Policy on Study Abroad

<https://www.york.ac.uk/staff/teaching/procedure/programmes/design/>

Please Select Y/N:	<input checked="" type="checkbox"/> Yes	if No move to section 10 if Yes complete the following questions
--------------------	---	---

9.a. Will the department need to agree new/ additional study abroad partnerships in order to offer this programme?

Please Select Y/N:	<input checked="" type="checkbox"/> No
--------------------	--

9.b. Please briefly detail the nature of the study abroad (tick and/ or provide additional detail as appropriate):

i) Is it an additional/ replacement year? (please select)	<input checked="" type="checkbox"/> replacement year
--	--

Additional details:

Year 4 of the MChem integrated masters can be spent in York, on industrial placement or under existing arrangements at a range of overseas partner universities. The structure of the year is essentially the same comprising M-level study of an independent research project (90 credits), a literature review module (10 credits) and open-learning advanced topics (20 credits).

ii) Is it compulsory/ optional element of the programme? (please select)	<input checked="" type="checkbox"/> optional element
--	--

Additional details:		
Students finalise their choice of Year 4 route during Year 3.		
iii) If it is an additional year, is it direct entry/ transfer in? (please select)		
Additional details:		
n/a		
iv) How will students taking Study Abroad be assessed?		
<p>The 10-credit literature review module is assessed independently through the written review and reference list by two academic staff in York (the review topic being linked naturally to the project). The same pair of assessors mark the project report, accounting for 40% of the 90-credit project module mark, and assess the accompanying oral presentation and viva (with project-specific and synoptic elements) in York at the end of the year, accounting for a further 25%. The remaining 35% of the project module mark comes from a project execution mark that is generated by the project supervisor in the overseas university. All marking follows closely defined mark schemes and project execution marks are moderated by the Department's Yr Abroad officer and the Chair BoE. The 20-credit open learning module is assessed in the Summer common assessment period through a written exam, covering the open-learning-delivered M-level advanced topics and underlying synoptic knowledge both linked to the study of a selection of recently produced York research papers. Students must answer a question on three different topics.</p>		
v) Can it be reassessed? (please select Y/N)	Yes	Explain how:
Explain how:		
Resits are available for the open learning module. The lit review can be re-submitted. The project report can be re-submitted in the University-defined case of a marginal fail.		
vi) If a student fails the Study Abroad which programme will they transfer onto or will they leave the University?		
Students graduate with a BSc Hons degree based on their results at the end of Year 3.		
vii) How will the programme team manage the risks associated with offering Placement Learning and Study Abroad?		
<p>The Department has many years experience of running both placement and study abroad MChem degrees under former programmes. We have separate members of staff monitoring both programmes during recruitment (to placement or year abroad) and execution. Academic staff supervise both types of project in collaboration with a 'local' supervisor and this includes a site visit and a mid-year interim meeting in York (the latter only in the case of placements). Partner institutions and industries are rigorously vetted before being admitted to either scheme because of the specific M-level requirements of York placements. We have built up a formidable list of regular destinations featuring companies and universities who are familiar with our working practices.</p>		
10. Work-based learning (including years in industry)		
It is strongly recommended that departments that do not already have an established work-based learning programme should contact Careers for help and advice.		
10.a. Does the programme include the opportunity to undertake work-based learning/ placements, including years in industry? All such programmes must comply with the policy on work-based learning and placements		
https://www.york.ac.uk/staff/teaching/procedure/programmes/design/		
This should include the signing of learning agreements between the student, department and work-place		
Please Select Y/N:	Yes	if No move to section 11 if Yes complete the following questions
i) Is it a compulsory or optional element of the programme?		
Please Select:	optional	
ii) Briefly detail the nature of the work-based learning:		
<p>Year 4 of the MChem integrated masters can be spent in York, on industrial placement or under existing arrangements at a range of overseas partner universities. The structure of the year is essentially the same comprising M-level study of an independent research project (90 credits), a literature review module (10 credits) and open-learning advanced topics (20 credits). On industrial placement, the 90-credit research project is conducted within the placement company in the area of its operations. In some cases, the project covers the day-to-day work of the student within the company; in others, the company allows the student to complete the required amount of research in addition to their more routine role within the placement.</p>		
iii) Who will be responsible for sourcing and arranging the placement: (please select)	Student	

Additional details:	
Placements are obtained through a standard application/interview process in competition with students from around the country. The Department's strong connections with a significant number of companies and reputation for providing strong performing placement students means that many companies target the Department specifically when recruiting. Running placements in Year 4 means that York students are more knowledgeable and more mature than many from competitor departments.	
iv) Is the work-based learning an additional year in industry?	
Please Select Y/N: <input type="text" value="No"/>	if No move to section 10.b. if Yes complete the following questions
v) Is it direct entry/ transfer in? (please select) <input type="text"/>	
Additional details:	
N/A	
vi) What will be the criteria for the selection of locations for work-based learning?	
N/A	
vii) How will the department ensure a sufficient number of work-based learning opportunities?	
N/A	
viii) How will the department make work-based learning providers aware of their responsibilities?	
N/A	
ix) How will the department make students aware of their rights and responsibilities?	
N/A	
x) How will students taking a year in industry be assessed?	
N/A	
xi) Can it be reassessed?	
Please Select Y/N: <input type="text"/>	
if yes, please explain how:	
N/A	
xii) How will the programme team manage the risks associated with offering a year in industry?	
N/A	
10.b. For programmes involving other forms of work-based learning other to years in industry it is strongly recommended that departments that do not already have an established work-based learning programme should contact Careers for help and advice.	
All such programmes must comply with the policy on work-based learning and placements https://www.york.ac.uk/staff/teaching/procedure/programmes/design/	
This should include the signing of learning agreements between the student, department and work-place	
i) What will be the criteria for the selection of locations for work-based learning?	
The Department's Industrial Placement Officer ensures that all companies involved in the scheme have the facilities and scope within their daily operations to support an M-level research project in addition to providing workplace experience. The companies must agree, subject to confidentiality agreements, that results can be reported by students in sufficient specific detail to allow objective assessment of the project. Students cannot apply to placements outside the agreements established between Chemistry in York and existing company signatories to our agreements.	
ii) How will the department ensure a sufficient number of work-based learning opportunities?	
Our previous experience under existing programmes ensures that we have established a working relationship with a wide range of companies in the UK and Europe. Companies demonstrate a loyalty to the Department based on their satisfaction with previous recruits. In recent years, the Department has regularly placed between 50 & 60 students. Whilst this is a smaller number than the number of students who register interest in the scheme end of Year 2, most students who actively pursue placements during Year 3 are successful in obtaining a placement.	

iii) How will the department make work-based learning providers aware of their responsibilities?
Companies sign up to our existing placement scheme on the basis of an understanding of the way our integrated masters Year 4 placement scheme works. This negotiation will continue under the aegis of our Industrial Placement Officer.
iv) How will the department make students aware of their rights and responsibilities?
Students are briefed by the Department's Industrial Placement Officer on an individual basis immediately before the placement begins. There is also a placement handbook and an academic supervisor who oversees the placement from the York side.
v) How will students undertaking work-based learning be assessed?
The 10-credit literature review module is assessed independently through the written review and reference list by two academic staff in York (the review topic being linked naturally to the project). The same pair of assessors will also assess the project report.
vi) Can it be reassessed?
Please Select Y/N: <input checked="" type="checkbox"/> Yes
if yes, please explain how:
Results are available for the open learning module. The lit review can be re-submitted. The project report can be re-submitted in the University-defined case of a marginal fail.
10.c. Support for students on work-based learning
i) How will students be briefed prior to, and de-briefed after, work-based learning?
Those students successful in securing industrial placements are centrally briefed by the Department's Industrial Placement Officer and will already have access to the placement Handbook. All students are individually briefed at the end of Year 3 prior to commencement of placements covering aspects of H&S, disclosure of disabilities and reminders of the expectations and assessment of the placement. All students are requested to submit a questionnaire at the end of the placement providing the opportunity to reflect on their experience during the year and provide feedback on the specific placement offered by their company.
ii) Who in the department will be responsible for overseeing students whilst they are undertaking work-based learning?
(max 200 words) The Industrial Placement Officer (currently Dr Brian Grievson) will continue to oversee the Year in Industry scheme from advertising the scheme to students, liaising with companies to invite them to offer interviews inside the Department and provide links to external interviews and online applications, through to collecting feedback from students and reviewing the list of companies listed within the scheme. This involves working closely with the companies themselves. During the placements, students on placement have an industrial project supervisor within the company and an academic project supervisor from York.
iii) By what means (e.g. work-based mentors, VLE, ongoing communication with the department) will students be supported when undertaking work-based learning?
Placement students are visited on site by their academic project supervisor in the first few months of placement and have email contact throughout. All students return to York for a formative presentation/viva in the third week of Spring Term involving the academic project supervisor, an academic IPM and the industrial project supervisor. Future research plans are refined at this meeting. Students send a draft of each of their literature review and final report for comment by the academic project supervisor prior to the submission of the final documents. Students are supported in the workplace by the company's project supervisor and often by co-workers on site.
iv) How will any work-based mentors be trained and utilised?
N/A
v) If mentors/ employers are to be involved in assessment how will they trained, supported and monitored?
Industrial project supervisors complete a pro forma with detailed level descriptors in order to award a project execution mark to the student. These marks (35% of module mark) are moderated by the Department's academic project supervisors.
vi) How will work-based learning be monitored and reviewed?
Principally through the placement review conducted through student questionnaires and overseen by the Industrial Placement Officer.
Careers & Placements - 'With Placement Year' programmes
Students on all undergraduate and integrated masters programmes may apply to spend their third year on a work-based placement facilitated by Careers & Placements. Such students would return to their studies at Stage 3 in the following year, thus lengthening their programme by a year. Successful completion of the placement year and associated assessment allows this to be recognised in programme title, which is amended to include 'with Placement Year' (e.g. BA in XYZ with Placement Year'). The Placement Year also adds a Programme Learning Outcome, concerning employability. (See Careers & Placements for details).
In exceptional circumstances, UTC may approve an exemption from the 'Placement Year' initiative. This is usually granted only for compelling reasons concerning accreditation; if the Department already has a Year in Industry with criteria sufficiently generic so as to allow the same range of placements; or if the programme is less than three years in length.

Programme excluded from Placement Year?	No	If yes, what are the reasons for this exemption:	
11. Additional information			
11.a. Recognition of prior learning / credit transfer Will this programme involve any exemptions from the University Policy and Procedures on Credit Transfer and the Recognition of Prior Learning? (Any exemptions must be agreed by the BoS and PVC Teaching, Learning and Students and then detailed in a departmental statement on credit transfer and the recognition of prior learning – contact your Quality Support Officer in the Academic Quality Team for guidance)			
Please Select Y/N:	No		
11.b. Continuing Professional Development			
Will any of the programme's modules be available on a freestanding basis?			
Please Select Y/N:	No		
if yes, please explain how:			
N/A			
11.c. Ethical considerations Does the programme give rise to any ethical issues, which might warrant wider consideration within the University? (E.g. will the programme receive sponsorship from a firm that is involved in activities that might give rise to ethical concerns (e.g. tobacco/arms)? Will students need to conduct experiments on humans or animals)?			
Please Select Y/N:	No	if yes, please provide brief details to be referred onto the appropriate body within the University:	
if yes, please provide brief details to be referred onto the appropriate body within the University:			
N/A			
11.d. Student involvement in programme development How were current and/ or former students involved in the development of this proposal/ programme?			
Student representation at DTC allows current students to share their thoughts about the design of the course. This consultation process is ongoing. During recent course re-design (as minuted at DTC 19/10/16) initial student responses include recognition of the benefits of rationlising content into fewer modules with the potential to reduce assessment-related workload for staff and students. We have previously monitored regular discussion of the challenge posed by multiple assessment points at our Staff Student Forum in coming to a decision about moving to fewer, larger modules. (This idea was also raised through a recent External Review and by Periodic Review; York Pedagogy has provided a route to rationalisation) We have monitored module and course (NSS) feedback from students to identify and retain popular aspects of our courses.			
11.e. External Examiners			
i) Will any additional external examiners need to be appointed for the programme?			
Please Select Y/N:	No		
ii) Does the programme team envisage any difficulties in obtaining appropriate external examiners?			
Please Select Y/N:	No		
iii) Will any external examiners be drawn from outside academia? (please select Y/N)	No		
Additional details:			
11.f. Transfers out of or into the programme			
ii) Transfers into the programme will be possible? (please select Y/N)	Yes		
Additional details:			
Students registered for the BSc programmes are entitled to transfer into MChem Chemistry up to the end of Year 2 provided their Yr2 mark exceeds the 55% threshold.			
ii) Transfers out of the programme will be possible? (please select Y/N)	Yes		
Additional details:			

Students registered for the MChem programme are entitled to transfer into other named MChem programmes at any stage provided, at the appropriate points, they achieve the 55% threshold at the end of Yr2, achieve a 50% average across Yr2 & Yr3, and study the appropriate option modules and project/lit review/open learning areas for the named MChem programme in question. Provided they have achieved at least 40%, MChem students may transfer into the BSc programme/s up to the end of Yr2.

12. Exceptions to University Award Regulations approved by University Teaching Committee

Exception Please detail any exceptions to University Award Regulations approved by UTC	Date approved
n/a	

Quality and Standards

The University has a framework in place to ensure that the standards of its programmes are maintained, and the quality of the learning experience is enhanced.

Quality assurance and enhancement processes include:

- the academic oversight of programmes within departments by a Board of Studies, which includes student representation
- the oversight of programmes by external examiners, who ensure that standards at the University of York are comparable with those elsewhere in the sector
- annual monitoring and periodic review of programmes
- the acquisition of feedback from students by departments, and via the National Student Survey.

More information can be obtained from the Academic Support Office:

<http://www.york.ac.uk/about/departments/support-and-admin/academic-support/staff/#quality>

Date on which this programme information was updated:

30/08/2019

Departmental web page:

<https://www.york.ac.uk/chemistry/>

Please note:The information above provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if they take full advantage of the learning opportunities that are provided.

Detailed information on the learning outcomes, content, delivery and assessment of modules can be found in the module descriptions.

The University reserves the right to modify this overview in unforeseen circumstances, or where the process of academic development, based on feedback from staff, students, external examiners or professional bodies, requires a change to be made. Students will be notified of any substantive changes at the first available opportunity.

Programme Map: Module Contribution to Programme Learning Outcomes

The table maps the contribution to programme learning outcomes made by each module, in terms of the advance in understanding/ expertise acquired or reinforced in

Stage	Module		Programme Learning Outcomes							
			PLO1	PLO2	PLO3	PLO4	PLO5	PLO6	PLO7	PLO8

-----------------------	---	-----------------------------	--	---	--	--	--	-------------------------------------	--	--

		By working on (and if applicable, assessed through)		Engaging with lectures and learning support activities on Elements & Minerals, The Geosphere, The Hydrosphere, Past Climate, Biogeochemistry & Climate and Archaeological Palaeoenvironments. Applications to unseen problems and case studies in workshops. Formative activities include workshop assignments, practical elements (rocks, & microscopy), field work and summative assessment is through an assessed wiki website and a closed-book examination (Summer).		Study of mineral and rock samples in formative practical activity; aspects of data analysis summatively assessed through wiki based on course content	Learning support workshops; formative assessment through supported workshop and practical activities with summative assessment of written work covering specialised chemical topics at an intermediate level through an assessed wiki assignment (involving peer evaluation of websites) and examination.	Geological fieldwork/site visit to geological exposures. Formative assessment through follow-up report.	Application of isotopes and other approaches to dating on geological timescales through formative case studies and workshop activities. Group activity in development and evaluation of a wiki website with implicit summative assessment of teamwork.	
Stage 3	Core 7: Advanced Concepts	Progress towards PLO	Understanding high-level chemical principles across physical, theoretical and organic chemistry.				Development of written and oral presentation skills		Commercial applications of cutting-edge chemistry; creativity in research and applications	

		By working on (and if applicable, assessed through)	Engaging with lectures and learning support activities on Bioinorganic Chemistry, Electronic States of Atoms & Molecules, Statistical Thermodynamics, Applications of Quantum Chemistry, Pericyclic Reactions and Supramolecular & Nanoscale Chemistry. Applications to unseen problems in tutorial and workshops. Formative assessment is through small-group tutorial/workshop and computer-based assignments in each topic and summative assessment				Preparation of written tutorial and workshop exercises. Engagement in tutorials and workshops. Formative assessment of articulation of complex scientific concepts in writing and oral presentation.		Application of Supramolecular chemistry to commercial activities in industrial/medical chemistry through formative case studies and workshop activities. Introduction to research topics through lectures and formative case studies and workshop activities.	
Stage 3	Core 8: Synthesis & Structures	Progress towards PLO	Understanding high-level chemical principles across the organic-inorganic chemistry interface.				Development of written and oral presentation skills		Commercial applications of cutting-edge chemistry; creativity in research and applications	

		By working on (and if applicable, assessed through)	Engaging with lectures and learning support activities on Main Group Chemistry: Bonding & Applications, Synthetic Frontiers of Inorganic Chemistry & Ligand Design, Metal-Mediated Synthesis, Asymmetric Synthesis, Radicals in Synthesis and Advanced Separations & Mass Spectrometry. Applications to unseen problems in tutorial and workshops. Formative assessment is through small-group tutorial/workshop assignments in each topic and summative				Preparation of written tutorial and workshop exercises. Engagement in tutorials and workshops. Formative assessment of articulation of complex scientific concepts in writing and oral presentation.		Application of Main Group chemistry to modern materials through formative case studies and workshop activities. Introduction to research topics through lectures and formative case studies and workshop activities.	
Stage 3	Core 9: Compounds & Materials	Progress towards PLO	Understanding high-level chemical principles across physical and materials chemistry.				Development of written and oral presentation skills		Commercial applications of cutting-edge chemistry; creativity in research and applications	

		By working on (and if applicable, assessed through)	Engaging with lectures and learning support activities on Processes at Solid Surfaces, Principles of Diffraction, Electronic Properties of Materials, f-block chemistry, Materials & Nanoparticles and Electronic Spectra & Photochemistry of Transition Metals. Applications to unseen problems in tutorial and workshops. Formative assessment is through small-group tutorial/workshop assignments in each topic and summative assessment through a closed-book				Preparation of written tutorial and workshop exercises. Engagement in tutorials and workshops. Formative assessment of articulation of complex scientific concepts in writing and oral presentation.		Application of materials and nanochemistry to commercial activities in device and advanced materials technology through formative case studies and workshop activities. Introduction to research topics through lectures and formative case studies and workshop activities.	
Stage 3	Advanced Practical Research Training	Progress towards PLO			Experimental design and implementation	Data interpretation and analysis	Written scientific project reports and posters	Design and implement a research project	Team working towards a research goal, creative solutions in research	

	By working on (and if applicable, assessed through)			Advanced experiments and miniprojects	Advanced experiments in inorganic, physical and organic chemistry. Data obtained from the miniprojects. Summative assessment through extended reports building on Stage 2 report writing.	Lab reports for four advanced experiments and the group miniproject; the latter also includes production of a research poster by the group. All are summatively assessed.	Team miniproject - groups of 3-6 students tackle an open-ended problem with scope to design their own investigation on the basis of literature and their own ideas and in collaboration with a supervisor. Students take the lead with planning, risk assessing and evolving the project. Summative assessment through individual reports (covering the whole group's work) and a group poster.	Team miniproject involving teamwork in a research setting including planning, prioritisation, sharing of workload and interpersonal communication. Outcomes are implicitly assessed through the summative assessment of overall productivity (report) and team presentation (group poster). Implicit summative assessment of creative strategy in research and presentation thereof.

<p>Stage 3</p>	<p>Lasers in Chemistry</p>	<p>Progress towards PLO</p>		<p>Applying learning skills and core chemical principles to gaining a detailed knowledge at M-level of a chemical science specialism and applications in problem solving</p>			<p>Development of written and problem-solving skills</p>		<p>Applications of lasers in chemistry/spectroscopy; creativity in research</p>	
-----------------------	----------------------------	-----------------------------	--	--	--	--	--	--	---	--

		By working on (and if applicable, assessed through)		Engaging with lectures and learning support activities on Introduction to Lasers, Lasers in Frequency Domain Spectroscopy and Lasers in the Time-Domain: Reaction Dynamics. Applications to unseen problems and case studies in workshops. Formative activities include workshop assignments and summative assessment is through an assessed workshop and a closed-book examination (Summer).			Learning support workshops; formative assessment through supported workshop activities with summative assessment of written work covering leading-edge, specialised chemical topics and current research literature through an assessed workshop and examination.		Application of lasers in high resolution and time-dependent spectroscopy. Creative experimental design through formative case studies and workshop activities. Introduction to research topics through lectures and formative case studies and workshop activities. Implicit summative assessment through exam.	
Stage 4	MChem Advanced Research Project	Progress towards PLO		Fundamental investigation of specific chemical principles in the area of atmospheric and environment-related chemistry	Design laboratory experiments and carrying out risk assessments. Documenting work through a lab book.	Masters-level data interpretation and analysis	Oral and written presentation skills	Plan, design and conduct an independent open ended investigative research project in the area of atmospheric and environment-related chemistry	Problem solving, time management and team working during research projects. Creativity in research.	

		By working on (and if applicable, assessed through)		M-level research including literature comprehension. Formative research and laboratory experiences are guided by the supervisor and other research group members. Formative assessment of a project report draft and practice presentations. Summative assessment by final project report (40%), supervisor's project execution mark (35%) and oral presentation/exam (25%).	Research Project. Collaboration with project supervisor and research group encourages development of increasingly independent approaches to safe working and the design and interpretation of experiments. Summatively assessed through the written report and the supervisor's project execution mark (35% of module).	Research Project. Collaboration with project supervisor and research group encourages development of skills in data analysis. Summatively assessed through the written report (40% of module).	Research project report and oral presentation	Research Project. Students experience an extended, independent project experience within a research group with the potential to produce publishable research for chemistry and related journals. Formative experience is provided through introductory courses (literature, safety, planning etc.) and through support within research groups and supervision. Summative assessment is achieved through assessment of the project by report and oral examination, and through the	Research Project. Students experience an extended, independent project experience within a research group involving engagement with planning, time management, teamwork and interpersonal communication with a range of Departmental staff and co-workers. Formative feedback available through academic supervision with summative assessment of outcomes implicitly assessed through overall productivity (report/oral, 40% /25%) and execution (35%).	
Stage 4	Literature Review	Progress towards PLO		Researching a project-related literature topic in the area of atmospheric and environment-related chemistry		Collating, interpreting and presenting results from the chemical literature	Preparing a well-presented report using ChemDraw and related software.			

		By working on (and if applicable, assessed through)		Literature gathering, analysis and interpretation. Formative workshop on the use of search engines; commentary on draft literature review document. Summative assessment through final written literature review (2500-3000 words).		Writing a literature report; formative elements include a workshop on using the research literature and databases and commentary on a draft of the literature review by the project supervisor. The final literature review is summatively assessed.	Writing a literature review at a level consistent with published materials. Commentary on a draft of the literature review by the project supervisor before the final literature review is summatively assessed.			
Stage 4	Core 10: Advanced Chemistry	Progress towards PLO		Applying learning skills and core chemical principles to gaining a detailed knowledge at M-level of a chemical science specialisms including atmospheric and environment-related chemistry and applications in problem solving					Develop approaches to lifelong & workplace learning for CPD; identifying specific learning needs	

	By working on (and if applicable, assessed through)		Advanced distance learning topics in atmospheric and environment-related chemistry plus (two from) Inorganic Chemistry; Materials Chemistry; Organic Chemistry; Physical / Analytical Chemistry. Formative assessments through online tools/quizzes. Summative assessment through closed-book exam (Summer).					Engage with distance learning packages covering interdisciplinary modern chemical research in preparation for summative examination. Distance learning materials contain formative assessment points through suitable VLE quizzes etc.

Overview of modules by stage										
Notes:										
[1] The credit level is an indication of the module's relative intellectual demand, complexity and depth of learning and of learner autonomy (Level 4/Certificate, Level 5/Intermediate, Level 6/Honours, Level 7/Masters)										
[2] The credit value gives the notional workload for the module, where 1 credit corresponds to a notional workload of 10 hours (including contact hours, private study and assessment)										
[3] Special assessment rules (requiring University Teaching Committee approval); P/F – the module marked on a pass/ fail basis (NB pass/ fail modules cannot be compensated); NC – the module cannot be compensated; NR – there is no reassessment opportunity for										
[4] Independent Study Modules (ISMs) are assessed by a dissertation or substantial project report. They cannot be compensated (NC) and are subject to reassessment rules which differ from 'taught modules'. Integrated Masters programmes may designate a project in										
Core & option module table (add additional rows as required)										
Stage (e.g. Stage 1, Stage 2)	Core/ Option	New/ substantially revised module – Yes/ No	Module title	Module code	Credit level[1]	Credit value[2]	Prerequisites, Corequisites, Prohibited combinations (name of modules(s))	Assessment rules[3],[4]	Timing of module (eg. AuT – Autumn, SpT – Spring, SuT – Summer Term, Year long)	Format, contribution to module mark and timing of summative assessment(eg. essay, 50%, AuT wk10, exam and 50%, SpT wk1)
1	Core	Yes	Core 1: Fundamentals of Chemi	CHE00015C	4	30			AuT	85% exam SpT and 15% workshop AuT
1	Core	Yes	Core 2: Chemical Properties and	CHE00016C	4	30	Core 1		SpT, SuT	85% exam SuT and 15% workshop SpT
1	Core	Yes	Core 3: Molecules and Reaction	CHE00017C	4	30	Core 1	The assessed component of the self-study course (Macromolecules) is a short video or an article which would be impractical to reassess and will not be of value for the students.	SpT, SuT	85% exam SuT and 15% tutorial SuT (Macromolecules)
1	Core	Yes	Skills for Chemists	CHE00019C	4	10		A diagnostic assessment of maths skills is required (Wk2 AuT) as the students need a certain level in maths in order to cope with the Chemistry course. The pass threshold corresponds to the lowest acceptable level. The Department will provide support to failing students throughout the first term to help bring them to the required level tested through re-assessment (Wk9 AuT). The questions for the test will be drawn from a bank of questions so that the test can be repeated several times, if required. The 'no reassessment' part is assessed via presentations for which reassessment would be very impractical and of doubtful value.	Year Long	30% exam SpT, 30% group presentation AuT, 40% exam SuT

								<p>The module is not marked on a PASS/FAIL basis, but it contains, in addition to the credit-bearing elements, a single P/F assessment, which assesses each student's ability to work safely in the chemistry laboratory. This is crucial for the practical work which follows in subsequent years, and therefore merits a P/F assessment. For students who fail this assessment at the first opportunity, special measures will be deployed, including retraining, closer supervision and multiple opportunities to retake the assessment during the Spring and Summer terms.</p> <p>The 'no reassessment' components are laboratory experiments. It is impractical to put in place reassessment of this work although it may be possible to set a reassessment of part of the laboratory write-up involving sample data sets. However, this would not in any sense correctly reflect the competence of the student to carry out practical chemistry, a component that lies at the heart of undergraduate chemistry training and which constitutes a major part of the Royal Society of Chemistry accreditation process.</p>		
1	Core	Yes	Practical Chemistry	CHE00018C	4	20			Year Long	P/F skills test AuT, 45% skills tests SpT, 5% coursework SpT (lab book), 25% practicals SuT (Physical Chem.), 25% practicals SuT (ICP)
2	Core	Yes	Core 4a: Molecules in Action	CHE00016I	5	20	Chemistry Stage 1 modules	<p>Safety Pass/Fail assessment can be repeated unlimited number of times until a Pass mark is achieved. The 'no reassessment' components are laboratory practical. It is completely impractical to put in place reassessment of laboratory work although it may be possible to set a reassessment of part of the laboratory write-up involving sample data sets. However, this would not in any sense correctly reflect the competence of the student to carry out practical chemistry, a component that lies at the heart of undergraduate chemistry training and which constitutes a major part of the Royal Society of Chemistry accreditation process.</p>	AuT	80 %exam SpT, 20% practicals AuT

MChem the Atmosphere and the Environment 2017 Complete Final PDD

2	Core	Yes	Core 4b: Theory, Analysis and N	CHE00017I	5	20	Chemistry Stage 1 modules	The 'no reassessment' components are laboratory practical. It is completely impractical to put in place reassessment of laboratory work although it may be possible to set a reassessment of part of the laboratory write-up involving sample data sets. However, this would not in any sense correctly reflect the competence of the student to carry out practical chemistry, a component that lies at the heart of undergraduate chemistry training and which constitutes a major part of the Royal Society of Chemistry accreditation process.	AuT	80% exam SpT, 12.5% practicals AuT, 7.5% workshop AuT
2	Core	Yes	Core 5: Reactivity	CHE00018I	5	30	Autumn term Chemistry stage 2 mod	The 'no reassessment' components are assessed by presentation (reassessment would be very impractical and of doubtful value) or are a laboratory practical. It is completely impractical to put in place reassessment of laboratory work although it may be possible to set a reassessment of part of the laboratory write-up involving sample data sets. However, this would not in any sense correctly reflect the competence of the student to carry out practical chemistry, a component that lies at the heart of undergraduate chemistry training and which constitutes a major part of the Royal Society of Chemistry accreditation process.	SpT, SuT	70% exam SuT, 10% practicals SpT SuT, 11.67% workshop SuT, 8.33% presentation SuT
2	Core	Yes	Core 6: Spectroscopy and Chemistry	CHE00019I	5	30	Autumn term Chemistry stage 2 modules	The 'no reassessment' components are assessed by a laboratory practical. It is completely impractical to put in place reassessment of laboratory work although it may be possible to set a reassessment of part of the laboratory write-up involving sample data sets. However, this would not in any sense correctly reflect the competence of the student to carry out practical chemistry, a component that lies at the heart of undergraduate chemistry training and which constitutes a major part of the Royal Society of Chemistry accreditation process.	SpT, SuT	55% exam SuT, 30% practicals SpT, 15% workshop SuT
2	Core	Yes	Dynamic Earth: Origins, Evolution, Biogeochemistry and Climate (DE)	CHE00020I	5	20	Chemistry Stage 1 Modules, or by special permission of module coordinator		SpT, SuT	80% exam SuT, 20% assessed wiki SuT
3	Core	Yes	Core 7: Advanced Concepts	CHE00026H	6	20	Chemistry Stage 2 modules		Year Long	85% exam SuT, 15% workshops SpT
3	Core	Yes	Core 8: Synthesis & Structures	CHE00027H	6	20	Chemistry Stage 2 modules		Year Long	85% exam SuT, 15% workshops SpT
3	Core	Yes	Core 9: Compounds & Materials	CHE00028H	6	20	Chemistry Stage 2 modules		Year Long	100% exam SuT
3	Core	Yes	Atmospheric Chemistry (AC)	CHE00031H	6	20	Chemistry Stage 2 modules, or by special permission of Module Coordinator		AuT	80% exam SpT, 20% workshop AuT

									We view it as inappropriate to reassess laboratory work because any reassessment would not provide a properly representative assessment of the practical skills of the student nor their development during extended periods of practical chemistry courses. It also fails to properly document their commitment to practical chemistry, a component that lies at the heart of undergraduate chemistry training and which constitutes a major part of the Royal Society of Chemistry accreditation process. In addition it would be time-consuming, expensive to resource and challenging to organise reassessments for every practical component that we run across the four years of the course. In order to minimise the potential impact of such a policy, we propose to follow closely the development and performance of all students across each of their practical courses and to define regular check points to ensure that each student is maintaining an adequate level of performance. For special cases, where a student may miss the bulk of or all of a practical course through no fault of their own, we would devise a resit task to be taken during the August resit period. However, this would be the exception rather than the rule and organised on an ad hoc basis. The MChem mini-projects can be reassessed by a resubmission of the report, but only if the student has successfully completed the practical work.		
3	Core	Yes	Advanced Practical Research Training	CHE00005H	6	20	Chemistry Stage 1 and 2 Core Modules.		Year Long	30% practicals AuT, 50% miniproject report/group poster SpT, 20% open book Int Spec exam SpT
