Publication of Knowledge Exchange Framework (KEF 3)

Research England released the latest Knowledge Exchange Framework results on Wednesday 27th September and these are available on the KEF’s interactive website.

The KEF is an institutional-level exercise which provides performance information about universities’ knowledge exchange activities. The KEF is published annually to allow universities to better understand and improve their own performance in knowledge exchange. It is a powerful tool to describe the breadth of scope of knowledge exchange. It also provides important evidence of different university strengths through peer group comparisons.

University of York Highlights
York’s performance is ‘High’ or ‘Very High’ in five of the seven performance areas. In Public and Community Engagement, the University of York has increased its performance since the second iteration, which is now in line with the cluster average. The University’s
full narrative elements and all other institutions’ data can be accessed via the KEF dashboards.

The University of York is passionate about engaging diverse communities to increase the positive impact of its research beyond academia through a wide range of activities. These include participation in research and its co-design and co-production, open lectures, consultations, festivals and exhibitions, networking, and training and development. The KEF is one way by which our KE activities, to support this ambition, can be evidenced.
